

Archaeological Investigation Report
**Sydney Metro City and Southwest
TSE Works**
Barangaroo Station

JUNE 2022

VOLUME 5: APPENDICES (MAIN REPORT)

Painting by Samuel Elyard (unsigned) of Millers Point, dated to 1862-1873, looking to the north. Langford's House is shown on the right-hand side in the foreground, with natural beaches on either side. 'Miller's Pt.' SLNSW ML, DGD 5, IE650340, File No. FL650451.

APPENDIX 5.1: CONTEXT REGISTER

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
R	1	Modern Levelling Fill	Levelling fill	7	-	-	Levelling event for Hickson road. Seen in North-facing section, south of blinding slab. Consisting of 4 distinct fills: 1) blue metal road surface (330mm thick) 2) compact mid-brown sandy clay with sandstone and service pipe (140mm thick) 3) compact sandstone fragments/disintegrated sandstone layer (130mm thick) 4) similar to layer 2, same inclusions but the soil is slightly greyer (120-130mm thick).	Levelling event for Hickson road, 20th century consolidation.	650-680mm thick.	-	2
R	2	Levelling Fill	Levelling fill	7	-	-	Earlier levelling fill event under 001, less compact. Seen in North-facing section south of blinding slab. Consists of 4 layers: 1) moderately compact sandy red/yellow/brown clay with inclusion of sandstone (<30mm) 2) grey/brown sandy clay with inclusion of sandstone (<80mm) and charcoal (100-200mm thick) 3) mid-yellow sandy clay with large sandstone (<70mm), only present in East part of section (0-100mm thick) 4) mid-brown sandy clay with small inclusions of sandstone, sandstock brick (<10mm); sitting over thin layer of marbled clay. Layer 450-500mm thick.	Earlier levelling fill, late 19th century/early 20th century.	-	1	3
R	3	Levelling Fill	Levelling fill	7	-	-	Soft 19th century mid-dark brown silty sandy clay levelling fill with sandstone inclusions <70mm. Only very top of fill is shown. Seen in North-facing section, south of blinding slab.	19th century levelling fill that has been truncated/scrapped away, then potentially redeposited opportunistically.	-	2	-
R	4	Levelling Fill	Levelling fill	7	-	-	Moderately compact sandstone rubble fill capping 005, to the north of modern stormwater service. Follows slope of deposit (005) downhill. Depth: 160mm-230mm.	Levelling fill capping 005.	-	-	5
R	5	Working surface	Surface	6	-	-	Organic clay & wood shavings surface/deposit. North of large modern concrete stormwater pipe. Soft black silty clay with frequent shell inclusions, patchy in places and thin in others - some pieces cut into surface, in other areas deposit slopes down towards piers.	Working wharf surface. Piers built first, surface accumulated around under wharf. Possibly represented pause in reclamation fills being laid.	-	4	14
R	6	-	-	-	-	-	CANCELLED	-	-	-	-
R	7	-	-	-	-	-	CANCELLED	-	-	-	-
R	8	Timber piles	Structure	6	-	-	2 circular wooden pier piles, 005 accumulation around them. One cut off much higher than others. One 260mm diameter, the other 200-220mm diameter. Possible third rectangular post after 005 removed.	Timber piles for 1910s wharf structure	-	5	14
R	9	Timber pile	Structure	6	-	-	Wooden sub-circular pier pile cut into 006. Sub-circular wooden post, not cut very neatly, top partially torn off, cut off at a similar height to lower 008 pile. Diameter 300mm, depth 350mm.	Timber pile of 1910s wharf structure	-	7	6

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
R	10	Modern demolition fill	Demolition deposit	7	-	-	Mid-brown, mixed late 20th century building materials (DP brick, plastic wire casing, metal grilling) and sandy soil fill. BM, plastics and variety of modern items observed within fill. Some piles of large floating late 20th century pale grey concrete. 400-600mm thick.	Modern demolition fill likely of 1910s wharf building. Overburden, late 20th century fill.	-	-	13
R	11	Dibbs' seawall	Seawall	5.1	-	-	Consists of one row of larger, regular square-rectangular sandstone blocks. Well made. Laid in 'header stretch' style Cut by ceramic service running E-W. Blocks are 540-1140m long, 640-650m wide and 300-570mm high. Wall at least 8500m long but extends further north, does not extend south (potentially due to removal). Blocks on the top course are taller than lower courses. Grooves (400 x 270 x 10mm and 560 x 140 x 40mm) evident in some blocks. Appears to be include a yellow sandy mortar. Stairs and wall continuation uncovered to the North.	Dibbs L-shaped sandstone seawall. Possibly re-used blocks from the demolition of Langford's house.	-	10	77
R	12	Wharf surface	Surface	5.1	-	-	Wharf surface; black industrial fill/boiler ash on eastern side of seawall 011. Extends to eastern L.O.E, south to blinding slabs disturbance and west to NE-SW running line of sandstone/Clyde street (?). Coarse grained and crunchy with slag and gravel inclusions and pockets of finer grained sandier dark fill.	Dibbs' wharf surface, c.1890, sits slightly above seawall 011	-	33	29
R	13	Reclamation fill	Reclamation fill	6	-	-	Reclamation fill on western side of seawalls 011 and 021. Fill consists of a mottled mid-brown sand with large amounts of sandstone inclusions (10mm-200mm) and some sandstone brick fragments. Some visible layers of dark silty sand with cinder ash which indicate different fills used for the same event. Depth is at least 800mm under modern fill but continues deeper. Could extend to deposit 005 to the west, and continues further north along the wall. Tip lines visible further to the north near the stairs, and are sloping down to south. Bands of darker organic material, as well as some bands of light brown mortary fill.	Reclamation fill, large blocks of sandstone probably placed first then a mixed sandy fill on top. Sandstone potentially from quarry as sandy fill/tip lines are sloping to the south so fill dumped in from the north - potentially the jetty adjacent to the stairs. Organic material indicates slow accumulation of fill rather than one main event. (17/07/18 addition).	-	10	-
R	14	Reclamation fill	Reclamation fill	6	-	-	Mid-brown medium grained sandy soil reclamation fill with BM inclusions (sandstock and sandstone fragments, 10-20mm in size). Beneath black organic deposit 005. Exposed in SE area of R.	Reclamation Fill event - part of same phase as 013 reclamation fill	-	5	-
R	15	-	-	-	-	-	CANCELLED	-	-	-	-
R	16	Bluestone sett paving	Surface	5.1	-	-	Bluestone setts forming extension of Clyde street, road surface. Post-dating sandstone paving 027 to North-East. Heavily disturbed to NW where sign of "collapse" visible. Sandstone paving at edges of bluestone sets, found to be part of sandstone seawalls 011 and 021. Setts are bluestone and measure 220mm x 200mm x 90mm. Very well worked.	Clyde street extension, road surface - bluestone sett paving with sandstone block edging. Sandstone not part of 016 - part of 011 and 021.	-	10	24

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
R	17	Posthole	Posthole	5.1	-	-	Two square postholes within wall 011), along South-East side of bluestone setts - foot of Clyde Street. Degraded timber posts in situ, packing is light grey blue metal cement (Same as 019). Postholes supported by addition of sandstone 'buttresses' which jutt out from 011. Pipe fill is a mid grey-yellow sand (018).	Postholes forming boundary fence/metal railing, same as 019. Fill may indicate postholes replaced since wall roughly 1880s but bluestone aggregate concrete dates to the turn of the century - contemporary with Clyde street and 021 construction.	-	18	16
R	18	Posthole fill	Fill	5.1	-	-	Pipe fill within postholes 017, mid grey-yellow sand.	Pipe fill within postholes 017.	-	10	17
R	19	Posthole	Posthole	5.1	-	-	Three square postholes cut into seawall 021 running NW-SE. Light grey blue metal cement (same as 017) packing.	Postholes possibly for a metal railing to separate Clyde Street from steps/water. Same as 017 in seawall 011.	-	20	16
R	20	Pipe fill	Fill	5.1	-	-	Pipe fill within postholes 019, dark yellow-grey silty sand.	Pipe fill within posthole 019.	-	10	19
R	21	Seawall extension and end to Clyde Street	Seawall	5.1	-	-	Later north-west extension of sandstone seawall 011 at foot of Clyde street with public access stairs. 4 courses of large sandstone blocks in stretcher bond. Second course appears to form part of a stone platform underlying blue stone pavers (010) at base of Clyde Street.	Later seawall extension and end to Clyde Street. Extension gave Dibbs access between the two properties.	-	10	-
T	22	Timber piles	Structure	6	-	-	Two wooden piles near western edge of excavation. In close proximity to western part of seawall (042). Very fragmentary, only 80mm to 160mm in height. Diameters are 240mm (southern pile) and 190mm (northern pile). Distance between piles is 390mm. Distance between northern pile and seawall (042) is 310mm. Exposed after removal of dark brown fill (053) with bricks which lies below modern overburden (010). Adjacent to concrete overlaying western part of seawall (042).	Timber wharf structure, part of 1910s wharf structure running parallel to another 1910s wharf warehouse 067 or could be the same. Does not appear related to wooden jetty structure (026). Most likely related to Cuthbert property, not Gibbs property like 026.	As seen on the 1943 aerial image.	10	53
R	23	Packing for paving 016	Fill	5.1	-	-	Moderately compact, black, fine sandy ash with dark grey gravel inclusions (<20mm and volcanic). Packing for bluestone setts 016.	Industrial fill used as packing around and between bluestone setts 016 during construction.	-	10	24
R	24	Bedding fill	Levelling fill	5.1	-	-	Mid yellow brown, moderately compact coarse sand with inclusions of white and yellow clay flecks. Occasional sandstone fragments <20mm; very rare dry-pressed and sandstock brick fragments <20mm. Explored at North-east end of Bluestone paving (016) levelling/bedding. Fill for bluestone paving (016) which caps sandstone rubble infill/rubble wharf platform (028).	Levelling/bedding fill for bluestone pavers 016. Fill sits directly above sandstone rubble infill and sandstone platform 028. Dry pressed brick in fill = late 19th century.	-	23	28
T	25	-	-	-	-	-	CANCELLED	-	-	-	-
T	26	Jetty	Structure	4	-	-	Timber structure, probably a jetty, consisting of at least 9 wooden piles and three planks (two running NW-SE and one running NE-SW). Four piles extend in a E-W line. Sandstone structures/seawalls (042 and 021) surrounds piles in north and east sides.	Timber jetty extending from 021, either of Cuthbert or Dibbs' property.	Association with 032 is unclear as some beams sit over clay, while one does not appear to relate to 032.	32	53

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
R	27	Sandstone blocks	Structure	5.1	-	-	Set of sandstone blocks keyed into O16 and running adjacent to seawall O11 as it runs toward Clyde St. Structure consists of three poorly dressed/deteriorated blocks (300 x 400mm, bonded by two larger blocks, 900 x 50mm). Joins are packed with sandstone cobbles and smaller crushed pieces up to 150mm.	Possible remnants of a later resurfacing of Clyde Street after construction of sea wall (O21) and paving (O16) or more unlikely, a stone support pad. Or may be contemporary with O16 and just a shoddier use of materials.	-	10	24
R	28	Sandstone rubble	Fill	5.1	-	-	Mid white, very compact, sandstone rubble (250-300 x 250-300 x 100-200mm in size, though frequently <100mm). Inclusions of rare red dry-pressed bricks fragments (<60mm). Exposed in a small area below O24, NW corner likely runs under all of O16/infills all of sandstone wharf O21. Capped with O24.	Sandstone rubble levelling fill/platform used as base for O16 bluestone pavers and sandstone paving (DP brick has 1890s date). Infilled against/within O21 sandstone wharf wall.	-	24	-
R	29	Reclamation fill	Reclamation fill	5.1	-	-	Sandstone rubble reclamation fill to east of seawall O11. Used to fill in seawall after construction. At least 500mm thick, 8m length (though cut by stormwater service), 4m wide but continues beyond L.O.E. Fill moderately compacted mid-brown medium grained sand. Overlaid with industrial material on top.	Fill used for reclamation behind seawall. Fill probably surrounds the beam (O30) since it is probably on piles.	-	12	11
R	30	Timber beam	Structure	3.2	-	-	Very large wooden beam, possible structure, to east of O11, running NW to SE under fill O29 and seawall O11. Timber measures 7480mm long. Western side shows signs of deterioration. Timber not fully exposed due to groundwater rising. (Note added 23/7/18: Fully exposed through use of pump - height of 380mm. Beam stops just as it reaches sea wall [O11]).	Timber beam, likely on piers, and potentially associated with Langford boatshed.	-	29	65
T	31	Surface	Surface	4	-	-	Compacted, black industrial fill/black ash wharf surface. Mixed gravel and charcoal. Abuts wall O41. Very undulating, likely heavily disturbed by demolition event, which pressed various pieces of wood into surface.	Black wharf surface, possibly inside Cuthbert's sawshed building.	Any depressions in the surface have been filled by above levelling fill O38.	38	56
T	32	Reclamation fill	Reclamation fill	6	-	-	Red and orange speckled white sandy clay. Roughly rectangular in shape, compact.	Clay reclamation and/or levelling deposit, for timber beams and posts (O26 and O32). Later than seawall, running E-W O41 and O42.	-	10	-
R	33	Demolition fill	Demolition deposit	6	-	-	Crushed sandstone fill overlying wharf surface O31. Compact light to mid brown/yellow fill of crushed sandstone. Fill was located east of seawall O11 overlying dark black wharf surface 10. Very undulating and contains inclusions of sandstone chunks, sandstone brick fragments and charcoal flecks.	Part of a large backfill/demolition event in this area, 20th century.	-	10	12
R	34	Timber piles	Structure	6	-	-	Group of three wooden piles west of O21 stairs, arranged in a triangular shape. Widths of all three piles vary, though depths are relatively similar. Included later as part of O67, 1920s wharf building. A fourth wooden pile located 2650mm to south of the grouped piles and included as part of this context. This fourth pile only has top 290mm exposed and is quite degraded in areas. Fourth pile is 290mm in diameter, and the depth of piles is roughly 1080mm. No cut obvious for three grouped piles or fourth pile and was surrounded by fill O13.	Originally thought to be part of a jetty, but is actually part of the piles for the 1910s wharf building O67. Runs parallel to Hickson Rd.	-	13	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
R	35	Timber piles	Structure	6	-	-	Two wooden piles located 750mm apart within cut 036. Both piles surrounded by 10mm of black organic material (probably decayed wood from pile). Southern pile only top exposed, and northern pile had west side exposed to depth of 750mm. Relatively intact.	Two wooden piles within cut 036 and fill 037, with unknown purpose. Part of 1910s wharf structure.	-	37	36
R	36	Cut	Cut	6	-	-	Roughly circular cut containing wooden piles 035 and fill 037. Shape is hard to determine due to proximity to LOE and undefined boundaries. Cut measures approximately 2000-2100mm E-W, 1700mm N-S. Depth exposed to 750mm.	Cut for wooden piles 035, possibly part of construction for 1920s wharf building.	-	35	-
R	37	Cut fill	Fill	6	-	-	Fill within cut 036 and surrounding wooden piles 035. Fill is a light brown/cream sand with small and large sandstone block and chunk inclusions, with charcoal flecks, very rubbly.	Fill for cut 036 and packing around piles 035. Part of construction for 1920s wharf building.	-	-	35
T	38	Levelling fill	Levelling fill	5.1	-	-	Crushed yellow orange, some grey, sandstone fill overlying wharf surface 031. Used to fill slipway and also provide a foundation for structure 074. Same as 084.	Levelling fill for structure 074 and used to fill in slipway. Same as 084.	Fill is dotted across the wharf surface in any depressions in wharf surface 031, has accumulated in these.	10	31
R	39	Cut	Cut	5.1	-	-	Cut 039 seen within SW facing section of trench to east of seawall 011 extension. Appears to abut seawall on its eastern side. Has gently sloping side from E to W with a rounded base as it abuts wall 011.	Cut of unknown purpose. Possible disturbance of 044, perhaps a packing or levelling fill before placement of 029. Possibly has something to do with wall 011, wall cut?	Unable to properly be defined due to proximity to Hickson Rd and LOE. Not seen during machining, only later in section.	40	44
R	40	Cut fill	Fill	5.1	-	-	Fill within cut 039, a mix of light brown sand and a mottled red, grey and orange clay. A lot of different inclusions are found within: bright orange machine extruded SS brick, sandstone chunks, charcoal flecks and chunks.	Fill of cut 039. Possible disturbance of 044, perhaps a packing or fill to level area before placement of 029. Fill of wall cut for 011?	Not properly defined due to proximity to Hickson Rd and LOE.	29	39
T	41	Seawall	Seawall	4	-	-	NE-SW running sandstone seawall (Cuthbert's) in the southern most part of Area T, same as NW-SE running seawall 042. Wall is 440-450mm wide and 1300+mm long (continues to Northwest under road), at least 960mm+ high; lowest course not exposed. Consists of irregular sized rectangular-square shaped blocks, some with tool marks. Blocks are 220mm-1300mm long, 170mm-230mm wide, and 70-310mm high. Bonding is a buff sandy mortar with small specks of lime.	Cuthbert's seawall running NE-SW. Middle section of wall potentially "repaired" as block size and coursing look different (or, perhaps had to build around a structural element). 041 is quite different in construction to 021 and 011 which have much larger blocks and are more consistent.	-	-	-
T	42	Seawall	Seawall	4	-	-	NW-SE running sandstone seawall (Cuthbert's) in southern area of Area T, associated and same as 041. At least 3 courses evident with possibly more submerged, consists of irregular sized, rectangular & square shaped blocks (280-1500mm long, 220-500mm wide and 140-360mm deep). Some smaller blocks used to fill in the gaps. Timber anchor beam 046 sits above middle of wall. Most sandstone blocks worked and tool/pick marks are present. A later concrete surface abuts wall along its north side towards its western end.	Cuthbert's sandstone seawall running NW-SE, disturbed at west end by 088 for wall anchor.	-	46	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
T	43	Timber piles	Structure	6	-	-	Grouping of three wooden piles, later than jetty 026. Piles relatively intact, slightly decayed and all broken on top. Located in corner where wall 021 and 042 meet, 700mm away from wall 042. Depth is approximately same for all. All are roughly circular and upright, with an average depth of 1050mm. Piles are 270mm, 290mm & 310mm in diameter.	Part of 1910s wharf building, included in the piles of 067.	-	-	-
R	44	Reclamation fill	Reclamation fill	3.2	-	-	Sandstone rubble reclamation fill with a mid brown sand. Located in south-west-facing section in eastern part of Area R - large trench to east of seawall extension 011. A thin dark brown/black silty sand sits above in the eastern end between 044 and 039. Sandstone rubble is 50-300mm in size. Some charcoal flecks present. Depth is 300mm and length is approximately 2100mm.	Reclamation fill, same as 065.	Only seen in section, below the cut 039 and fill 040. Hard to determine due to proximity to LOE and Hickson Road.	39	-
T	45	Timber fender	Structure	4	-	-	Square timber structure, comprised of fairly whole straight-grained trunks with bark (1200mm N-S, 1180 E-W). Timber buffer, timbers laid upright with timbers laid in between horizontally. 3 courses of stacked timbers found, timber sawn at ends but otherwise unworked. Bolt holes present. Thick iron sheeting was bolted to front of timber structure (north face). Abuts NW corner sandstone wharf 021.	A timber fender/buffer to stop boats bumping against sandstone wharf.	-	52	-
T	46	Timber anchor beam	Structure	4	-	-	Rectangular timber log or beam running E-W, laid horizontally and sitting on top of the sandstone seawall 042. Over most of the seawall except east end, and has been cut in west by 088. Wood is very decayed in parts. Circular or rectangular log. Concrete 057 is abutting it in western end along its north face. Bolts found in timbers, one at western end and one in middle. Western bolt is upright, and measures 100mm deep and 30-50mm wide. 6900mm long and continues into baulk.	Likely an anchor point for ships to dock along the seawall of Cuthbert's wharf.	-	-	42
T	47	Flat-lying timbers	Surface	4	-	-	Two flat long planks, south-east of 048. Two planks lying parallel to each other and running north-south. West timber largely decayed and continues further north; east timber more intact though still quite decayed. Between two planks is decayed wood, originally thought to be a third plank but is just decayed timber.	Possible remnant floorboards for building along wharf, possibly Cuthbert's wharf, or loose timbers used in ship building, or part of demolition in upgrade by Dibbs. Likely associated with 048.	Possible circular feature 058 excavated at north end of eastern timber.	38	31
T	48	Timber log	Structure	4	-	-	Log-like piece of timber with rectangular cut out, NW of 047. Circular timber piece laid north-south. Fairly intact. Rectangular cut out on west facing side in middle of log, measuring 265mm in length. Central hollowed out section within this cut, possibly from decay, measuring 210mm x 110mm. Half of the log is currently exposed, with the other half below the wharf surface. The log itself measures max. 1520mm long by 330mm wide. Depth currently 130mm. No cut is clear, very mixed and wharf surface makes it hard to determine.	Potentially structural timber beam, possibly upright going into rectangular cut, part of Cuthbert's wharf building in this area.	-	38	31

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
T	49	Timber chock	Structure	5.1	-	-	Timber "chock" sitting on top of and within 051 crushed sandstone fill. Not thought to be in situ. Possibly deposited during demolition of the area, potentially part of a "knee", possibly a "chock". Timber is 1060mm long (with a sloped section), 340mm wide and 350mm high. Hole 60mm wide through the centre.	Possibly a "chock" that is not in situ, similar to 047 and 048. Thought to have been deposited here as part of the demolition process.	-	-	51
T	50	Robber cut	Cut	5.1	-	-	Cut 050 north of wall 041 and parallel to it. Rectangular in plan, oriented NE-SW. Base is mostly flat, but slightly undulating, sides are sloping, but in some places vertical. 1330mm long, 930mm wide and 140mm deep. Filled with yellow sandy fill 051.	Robber cut. A stone pad possibly sat inside this cut for a girder which has been removed and the sandstone fill filling the depression.	Cutting 031 black industrial fill and filled with 051 crushed sandstone, which probably comes from the quarry.	51, 38	31
T	51	Fill	Fill	5.1	-	-	Fill 051 is moderately compact yellow crushed sandstone with large fragments of sandstone. Sand is coarse and includes large chunks of grey compact dry clay. Some artefacts. Completely excavated. A large wooden chock(?) sits above this fill and slightly in this cut although not associated with the cut, thought to be after demolition of the area.	Fill of robber cut 050. A stone pad possibly sat inside this cut for a girder which has been removed and the sandstone fill filling the depression.	-	-	50
R	52	Reclamation fill	Reclamation fill	5.1	-	-	Loose, mid brown, silty sand, moderate sandstone inclusions, occasional shell. Number assigned to the fills that infilled between seawall 011 and 041 to create the foot of Clyde St. 052 is comprised of several layers. 2 coins found within and an 1890s dry-pressed brick.	Reclamation fill/backfill event for construction of foot of Clyde St, overlies an older timber structure 045.	Originally thought to be the same as 024, but 052 is actually below 024.	24	75
T	53	Reclamation fill	Reclamation fill	6	-	-	Brown sand fill with frequent building material inclusions, predominantly sandstock bricks. Lies to SW of NW-SE running seawall 042 and west of sandstone wharf 021. Under wooden jetty 026 and under wooden piles 046. Bulk of fill machine excavated. Min depth of 1000mm (18/07/18). Under white clay (032) in west, under overburden (010) in remainder.	Reclamation fill under Dibbs' jetty (026) outside seawalls.	-	32	-
T	54	Sandstone paving	Surface	5.1	-	-	Sandstone paving, large worked blocks in middle of Area T, north of 048. Part of a floor surface, paving respects timber beams of wooden structure 074 and is probably from within this early building or wharf. Roughly square patch of stones remaining, measuring 2800 x 2700mm.	Sandstone paving, appearing to be within timber structure (074), pre-1910s as cut by 1910s wharf building. Likely a modern or later structure, as fill around is quite modern. Although the paving is higher than the beams, it is believed it is a fill of which is found in all rooms and the paving then sits above.	-	-	-
T	55	Timber piles	Structure	6	-	-	Three wooden, roughly circular piles, running E-W, just south of sandstone paving 054. Each pile is 1860mm apart and two western piles are largely intact compared to the third eastern one, which is decaye. Piles were exposed to a minimum depth of 40mm to 110mm. The three piles appear to be aligned in a row and the westernmost one is just to the south of the sandstone paving (054). Piles measure 215 x 200mm, 220 x 220mm and 240mm x 300mm (approx as decayed).	Piles forming part of the 1910s wharf building 067. Piles cut down through below surfaces, not a fence or jetty as first thought. Timber support piles for structure. Tops of piles cut and not broken off, indicative of the original top of the piles.	-	-	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
T	56	Levelling fill	Levelling fill	4	-	-	Crushed yellow/orange sandstone fill over whole of Area T, below wharf surface 031. Moderately compacted, friable yellow/orange sand with white and beige sandstone crush throughout. Few inclusions, some shell, charcoal pieces (20mm x 20mm) and sandstone pieces (10mm x 10mm).	Levelling/reclamation fill. Last of fill used by Cuthbert to fill in area for wharves. This fill is directly below the wharf surface 031. Found across all 3 test trenches in area.	-	31	63
T	57	Concrete surface	Surface	5.1	-	-	Concrete overlying part of west end of wall 042 and abutting 046. There are two sections of concrete, measuring 580mm in length and 200mm in width, maximum depth of 180mm. First is near the east end of 046 and quite rubbly and broken. Second is to west and more substantial. Flat surface with some undulations.	Post 1877 wharf surface, after the backfilling of the slipway. Only a small amount of concrete remains - could be a later reinforcement of wall 042, though hard to be certain due to the little remaining.	Some parts stained black from decaying wood laying against it.	31	42
T	58	Timber barrel?	Structure	4	-	-	Circular patch of heavily decayed timber. Mid brown, moderate compaction, very thin (approximately 5mm). Located at north end of long, decayed timber board 047.	Patch of decayed flooring related to the wharf front building in Area T. Given its circular shape there is a slight possibility it is the base of a barrel.	-	38	31
T	59	-	-	-	-	-	CANCELLED	-	-	-	-
T	60	-	-	-	-	-	CANCELLED	-	-	-	-
T	61	-	-	-	-	-	CANCELLED	-	-	-	-
T	62	Concrete support	Structure	6	-	-	Concrete slab on western limit of excavation. Modern pale grey concrete with blue metal inclusions (ranging from 5-15mm in size). Semi-circular indentation at one end. Directly overlays sandstone 056 continues west beyond LOE. <600mm north west of wooden pile underneath (010) overburden.	Remains of modern concrete, likely encasing a timber pile and used as support.	-	10	38
T	63	Reclamation fill	Reclamation fill	4	-	TT1	Light brown/grey sand fill discovered below crushed sandstone fill over wharf surface. First reached in TT1 adjacent to wooden beams 048 and 047, artefacts kept. Inclusions of yellow-white sandstone brick and sandstone fragments measuring approximately 30-100mm in length. Extent of fill unknown.	Reclamation fill. Considered to be middle layer of second phase of the filling event to prepare the site for Cuthbert's wharf.	-	56	66
T	64	Wharf surface	Surface	4	-	TT1	Thin black organic layer, possible work surface. Very soft, no inclusions. 5mm thickness.	Working surface of Cuthbert's original wharf. Found between two distinctive fill events, indicating enough time passed to allow build up or indication of work surface between two phases of the fill process.	-	66	68
R	65	Reclamation fill	Reclamation fill	3.2	-	-	Brown/grey sandy fill below backfill event 029 in Area R. Fill is medium grained with sandstone rubble inclusions and iron staining. Fill is at groundwater level. Timber 030 sits above and slightly within 065.	Reclamation fill event, likely associated with building up for Langford's boatshed. Unlikely that we have reached natural in this area.	-	29	-
T	66	Reclamation fill	Reclamation fill	4	-	TT1	Weakly compacted, light grey to yellow sandy fill. Larger sandstone pieces compared to previous fills 063 and 059 (sizes range from 5mm x 5mm to 120mm x 120mm). Depth/Height: min 125mm x 210mm.	Reclamation fill. Resumption of the infilling of the area for Cuthbert. The first layer of the possible second phase after the pause indicated by the black surface 064, directly below 066.	From colour and composition, context 066 looks like a combination of 056 and 063.	63	64

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
R	67	Timber wharf building	Structure	6	-	-	Series of roughly circular piles related to the 1910s wharf building, many groups of three piles. Most of piles aligned to run parallel to Hickson Road NW-SE, but a series of piles aligned NE-SW branch of piles were also part of this. Some have been sawn/cut at the top, particularly 034 and 055, as well as most of the piles north of 060. 034 and 055 exposed to a depth of approximately 1050-1080mm. The rest have not been dug completely, only the tops were exposed. Pile 034 and 043 have a distance of 5100mm between them and 043 and 060 have approximately 5400mm between them.	Compilation number that includes all the piles related to the 1910s wharf structure and includes already numbered piles, as seen on 1943 aerial.	Some piles were already given numbers and are included in this context 067. These include: 034, 043, 055, 022.	10	31
T	68	Reclamation fill	Reclamation fill	4	-	TT1	Soft black to light grey sandy reclamation fill. High percentage of sandstone inclusions and charcoal present. Abundance of crushed bone, degraded metal and glass. Found in TT1. Excavated to change into 070 stone rubble, then TT1 was abandoned.	Reclamation fill. After the large stone rubble 070, this layer was first fill to be placed in the building up for Cuthbert's wharf. Found consistently in TT1, TT2 and TT3.	-	64	70
T	69	Reclamation fill	Reclamation fill	4	-	TT2	Compact, mid grey coarse sand. Occasional yellow sandstone frags, charcoal flecks. Excavated by hand in TT2.	Reclamation fill identified in TT2. Same event as 063 in TT2 and 066 in TT1.	-	63	64
T	70	Reclamation fill	Reclamation fill	4	-	TT1, TT2, TT3, TT4	Mid yellow, compact, subangular and subrounded sandstone rubble in mid yellow coarse sand matrix. Excavated in three test trenches (TT1, 2, and 3). Sandstone rubble frequently 300 x 300 x 200-300mm, occasionally smaller fragments measuring 100 x 100 x 150mm.	Bulk reclamation fill, large sandstone rubble.	-	64	-
T	71	Timber pile	Structure	6	-	-	Timber pile identified in TT2 below reclamation fill 063. Degraded and approximately 200mm in diameter. Appears to go into 069 but unclear in section.	Timber pile below reclamation fill 063. Part of the 1910s wharf building 067.	-	63	-
T	72	Levelling fill	Levelling fill	5.1	-	-	Loose, dark grey, sandy levelling fill uncovered initially through machining near northern LOE. Many artefacts present. Directly below thin sandstone crush layer which sits below a thin dark brown/black organic layer. A trench was dug to remove these two upper layers and expose Fill (072). Trench size was 1180mm x 1070mm. Very loose compaction.	Levelling fill, same as 079. Part of larger surfacing event, associated with 063 wharf surface. May just be an isolated pocket of artefact accumulation. Artefacts all appear to be early 20th century.	Further excavation showed it was contained to small patch.	056, 063	73
T	73	Wood chip deposit	Deposit	4	-	-	Fill of wood chips excavated at northern end of Area T in slot trench/sondage (1130 x 700mm). Wood chips are dark brown, predominantly organic. Found across the slipway surface from the northern limit of excavation to the northwest of 054. Full extent unknown. Fill 072 comes down directly on 073. 073 is densely packed, with no sloping. There are no other inclusions in the fill, with little sediment. Likely relates to the timbers 078 that it surrounds.	Wood chip fill, possibly a product of works occurring in the area and related to the timbers 078 or part of the potential resurfacing event associated with 063 wharf surface.	-	72	80

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
T	74	Timber shed	Structure	4	-	-	Rectangular timber structure in north end of Area T, north of E-W running O55/O67. Timber structure aligned NE-SW. Some wooden beams are preserved better than others (particularly the western side). Respects the sandstone paving O54. Some of the beams have bolts in situ. The north-eastern part of the building is outside the LOE. One floating timber (1960 x 300 x 290-300m) to the north, which appears on same alignment as the structure; given context number (O92).	Timber shed, likely within Cuthbert's sawshed.	-	-	-
R	75	Harbour sands	Natural	4	-	-	Sterile naturally occurring harbour sands observed at several points in Areas R and T around seawalls; SE end of seawall O42 where it meets O21, and around walls O41 and O11 when the infill for the foot of Clyde street (O52) was removed. Sand is medium grained, light brown in colour with some streaks of brown organic staining. No inclusions. Sea wall O11 is overlies O75 at its eastern extent.	Naturally accumulating tidal/harbour sands/beach, same as O76 but colour different due to location. Appears more like natural beach sands compared to O76 which was limited to below the jetty O26.	Artefacts from lower levels.	52	-
R	76	Harbour sands	Natural	4	-	-	Accumulation of mid brown, medium grained sand with lenses of iron staining and dark organics. Harbour sands located below jetty. Very similar to O75. Observed in corner of O21 and O42 during machining and before water rose. Length 300+mm x width 400+mm.	Naturally accumulating harbour sands to south of seawall O42, same as O75. Difference in colour due to location, this deposit is impacted by being located below the jetty O26, whereas O75 is cleaner and appears more like a natural beach.	-	-	-
R	77	Levelling fill	Levelling fill	5.1	-	-	Mixed fill of sandstone rubble pieces, clay, sandstock brick frags and some metal observed beneath NE running arm of seawall O11 after removal of Clyde St infill of O52. Only seen beneath wall O11 where beach sands O75 drops off to the SW and fill has been used to raise ground surface.	Levelling fill to elevate ground surface for construction of O11. Was the rubble already in place as demolition debris from Langford's house/boat shed? Could also be debris from discard at base of Clyde street.	Wall O11 is definitely from post 1870s due to brick inclusions.	11	75
R	78	Assorted timbers	Structure	4	-	-	Assortment of timbers in the northwestern part of Area T. Timbers generally running NE to SW. Many timbers long and flat measuring up to 7m long. Structural timbers evident, along with selection of smaller pieces and metal objects. Many highly degraded. Surrounded by wood chip fill O73, likely part of the degraded timbers.	Timbers found to the north of the slipway, likely a collection of timbers related to shipbuilding activities in the area.	-	73	80
T	78	Structure	Structure	4	-	-	Rectangular wooden beams running NE to SW. Timbers part of Cuthbert's slipway for the repair of ships. Metal objects found around beams. Small discarded wood pieces also abundant, extremely degraded. Also of note were concentrations of industrial waste in numerous spots on the side of the main timbers.	Collection of wooden beams in north of Area T, that are the remains of the scaffolding and work area of Cuthbert's shipping repair yard slipway.	Small to medium sized roots throughout. Cut in one of the timbers.	79	80
T	79	Levelling fill	Levelling fill	5.1	-	-	Industrial levelling fill above O73 wood chip fill. Grey to black in colour, loose compaction. Sandy fill. Loose scatter of artefacts. Also above O78 wooden/timber beams in north of wharf surface. Depth varied from 30-120mm. Extends from western LOE to sandstone paving (O54) and from northern LOE to the sandstone wall, extending perpendicular to north from sea wall (O42).	Levelling fill, same as O72.	Recorded as O72 also.	84	73

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
T	80	Wharf surface	Surface	4	-	-	Compact black/dark grey fill, possible surface, below 073 wood chip surface. Very compact sandy fill. Covers entire wharf surface, spanning from Northern LOE to Northern stone of seawall (042), continues north into LOE. Dimensions: >10820 x 5160mm x depth unknown. Directly below timber beams (078).	Cuthbert's wharf surface, extends north from 083 paved slipway. Possible surface below timber beams 078, possible slipway continuation due to downward slope towards slipway.	-	78	95
T	81	Slipway wall	Retaining wall	4	-	-	Sandstone slipway wall extending NE from seawall 089. At least 6 stones long, three courses present (stone size ranges from 660 x 730 x 310mm, to 980 x 1130 x 310mm). Slate present between courses. Wall 081 is keyed into 089 in south end, joining to form a right angle corner, part of the slipway wall. Timber pile found against wall in middle section. Unknown relationship with seawall (042) due to disturbance. Length is 6850mm (second course longer in South) below overburden. At the south end, the 1st and 2nd courses are missing some stones, leaving voids.	Eastern slipway wall, retaining the slipway surface to west 083. Timber pile deemed part of the structure.	-	10	-
T	82	Backfill of slipway	Levelling fill	5.1	-	-	Mixed sands fill north of western end of seawall 042 and west of sandstone wall 081. Above 083 slipway surface. Mixed golden, yellow and grey/brown sands. Artefacts present. Inclusions of large sandstones (roughly 200 x 200 x 200mm). Slopes downwards to southwest like 083.	Backfill of slipway on Cuthbert's property.	-	38/84	83
T	83	Slipway surface	Surface	4	-	-	Sandstone surface of slipway below 082 fill, to north of seawall 042 and west of sandstone wall 081. Dark grey/black in colour with stone inclusions. Sloping downwards toward the southwest. Nails present. Stones are of various sizes, larger stones in south. Depth currently unknown, only exposed at its northern limit, level with northernmost stone of wall (081). 083 exposed to length of 2660mm+. The full extent not known due to rising water. Surface comprised of sandstone of various sizes (50 - 600mm). 083 is an uneven surface, possibly because all the rubble in the layer above has not been removed.	Slipway surface of slipway on Cuthbert's property.	-	82	-
T	84	Levelling fill	Levelling fill	5.1	-	-	Compact yellow crushed sandstone fill. Max 470mm thick. Sits atop 080 and fills 086, elsewhere sits atop 085.	Thin levelling fill above 031 on the wharf proper.	Contexts 084, 085 and 086 relate to the second phase of wharfage and the decommissioning of the slipway.	74	80
T	85	Levelling fill	Levelling fill	5.1	-	-	200mm thick fill of loosely consolidated black industrial waste, spread across the eastern end of the slipway above 079 and within cut 086.	Levelling fill found within cut 086 and along the eastern end of the slipway above 079.	-	84	-
T	86	Demolition cut	Cut	5.1	-	-	Demolition cut that removed the relationship between 081 and 031. Occurs within 1000-1500mm south of the slipway wall, running NE along line of slipway. Max 470mm deep. Varies between vertical and gentle-sided.	Demolition cut, relating to the second phase of wharfage and the decommissioning of the slipway. Could have removed sawshed footings but less likely.	Disturbed by 20th concrete and services.	85	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
T	87	Cut fill	Fill	5.2	-	-	Fill of cut 088, disturbance caused by construction of wall anchor. Fill includes the sandstone rubble from the seawall 042 and 089 that has been disturbed when wall anchor was put in. Sandstone is partly degraded and surrounded by light beige/grey sand.	Sandstone rubble fill of cut 088 caused from a steel wall anchor for ships cutting through walls 042 and 089, creating a large disturbance, dated to early 1900s.	-	-	260
T	88	Cut	Cut	5.2	-	-	Cut 088 containing fill 087. Cut has cut through walls 089 and 042. Clear cut marks are present on eastern end of wall 089, showing where the trajectory of disturbance for the addition of the steel wall anchor 260. Cut is hard to define. Approximate depth of cut is minimum 700mm deep, 1300mm wide and 1400mm long.	Cut for the addition of a deadman anchor 260 cutting through walls 042, causing a very large disturbance.	-	260	-
T	89	Blocked slipway wall	Seawall	5.1	-	-	SE-NW running sandstone seawall, possibly same as 042. Slightly different construction to 042, at least 5 courses of very large worked sandstone blocks (800mm x 210-260mm x 100-200mm). Along the north face is row (and at least 2 courses) of smaller sandstone blocks (170-380mm x 210-260mm x 100-200mm). Smaller row is like tumble and projects further from wall than main row. Wall truncated in east by sandstone rubble disturbance (088) and this cut separates wall 042 from its continuation 089. The relationship between this structure and wall 081 is undefined.	East end of wall is original sandstone seawall while the western end is wall over the slipway, blocking it at its souths end. Seawall dates to the 1850s - 60s and the extension to 1880s-90s.	A large stone in third course has 2 connecting L-shaped notches, possibly for timbers related to slipway. Keyed into wall 081. Cut by service in top 2 courses with DP bricks present, but not affecting original 089 wall.	-	83
T	90	Timber pile	Structure	6	-	-	Wooden pile west of 071 and east of 081. Surrounded by sandstone fill and rubble. Quite broken and decayed, with only 130mm exposed. The pile in alignment with 022. Diameter of 270mm. Possible cut around the pile, though this is hard to discern due to similar colour of the surrounding fill. Refer to 071 for original dimensions, as the context was damaged by machining.	Wooden timber pile in alignment with 022, so likely part of the 1910s wharf building 067. If counted as part of 022 it would date to 1910s and cannot be contemporary with wall 081.	Possibly part of 022, as on same alignment. Also recorded as 071.	-	-
T	91	Timber pile	Structure	6	-	-	Two piles of broken timber south-west of 090 and one possibly related/within cut 088. Appears to be on NE-SW alignment with a number of 067 piles. Depth exposed to 540mm. Diameter of 310mm. One pile possibly cut into the sandstone rubble disturbance (088) at a later date. A second pile also included in this context - this is to southwest and located on the south side of wall 081. Second pile is approximately 280mm in diameter and 600mm deep.	Possibly part of a middle supporting wall or line of supports for the 1910s wharf warehouse, since it is aligned NE-SW with piles 060 and 067 piles. Part of 067.	-	-	-
T	92	Timber beam	Structure	4	-	-	Timber beam north of 074 and part of 078. Large rectangular wooden beam. Length 1960mm x Width 300mm x Depth 290-300mm.	Timber beam part of 078.	Originally recorded as part of 074 structure. Given own number as not likely part of 074.	-	79
T	93	Construction cut	Cut	4	-	TT4	Cut in SW facing section of TT4. Cuts the wharf fills 031, 063, and some of 066. Is cut by 050. Cut sides slope down and base is slightly undulating, possibly indicating that is could be several cuts but fills are similar.	Construction cut for a wall support for sawshed.	Shape in plan difficult to discern. Similarity with 031 from surface difficult to see.	94	31

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
T	94	Fill	Fill	4	-	TT4	Fill within cut 093. Comprised of loose black cinder coke/ash, very similar to 031. Contains inclusions of organic material (decayed wood), charcoal, some sandstone (20-50mm in size), and a few artefacts, including loose nails. Recorded in section only.	Fill within cut 093.	-	50	93
T	95	Reclamation fill	Reclamation fill	4	-	TT4	Yellow sand under 080 only in slipway area, abuts 070 and 081. Soft sand with sandstone inclusions. Different to 070, although on the same level, no large sandstone pieces as 070, mostly sand.	Sandy reclamation fill. Corresponds to edge of slipway, thins out from supposed edge with commencement of 096. Thickest between the end of the slipway and beginning of 070.	-	80	96
T	96	Reclamation fill	Reclamation fill	4	-	TT4	Black sand at the western end of SW facing section of TT4. Under 095 and abutting 081. Weak compaction, black colour, sandy, many artefacts. Some sandstone. Length in section is 2670mm, which equates to width of slipway from wall 042 to east. Depth is >490mm, and continues below.	Reclamation fill relating to wharf and slipway build up.	Eastern end lines up with 054 sandstone paving to the NE.	95	-
W	97	Reclamation fill	Reclamation fill	4	-		Sandstone rubble fill east of sandstone seawall 100. Loose compaction with sandstone crumb and small to large pieces of sandstone (200-400mm in size). Colour from white/yellow/orange/pink. Continues to north, east and south. Depth of 890mm and width of 1490mm.	Rubble reclamation fill.	-	-	98
W	98	Working surface	Surface	4	-	-	Compact dark brown/black silty fill directly below 097 and above 099. East of seawall 100. Visible in south and east sections of machine-dug trench to the east of wall (100).	Possible working surface to east of wall 100 or reclamation fill.	Potentially made up of multiple layers in same event including thin (7-10mm) orange clay fill.	97	99
W	99	Reclamation fill	Reclamation fill	4	-	-	Dark brown sandy reclamation fill below 098 east of wall 100. Above very loose sand with lenses of gravelly black sand throughout, similar to 098. Minimum thickness of 370mm - not fully excavated.	Possible reclamation fill for compact surface 098.	Potentially multiple fills of the same fill event.	98	-
W	100	Seawall	Seawall	4	-	-	North-south running sandstone seawall. 3 courses of very large sandstone blocks, with an average size of 890 x 570mm. Top course is uneven soft white sandstone. Lower 2 courses made of neatly cut rectangular blocks with notched outer faces (possibly for transport). The average notch is 60 x 60 x 50mm in size. Exposed section measures L 6900m x W 810mm x H 1490mm. Structure continues to north and south.	Seawall. Assumed that upper course is deteriorated, hence uneven blocks. Stones hewn to fit very tightly together.	-	-	-
X	101	Clean-up	Fill	5.1	-		Clean-up around outcropping sandstone	Clean-up number assigned to collection artefacts around sandstone bedrock.	-	-	-
W	102	Wharf wall	Seawall	5.1	-	-	Sandstone wall for southern end of Dibb's wharf. W end; single large course, E end; 2 courses (but same approximate height). Rectangular blocks. Rough exterior face.	Dibb's wharf wall.	-	-	-
W	103	Reclamation fill	Reclamation fill	5.1	-	-	Fine to medium grained sand lensed darker sand with tip lines gently sloping north. At least 220mm thick	Reclamation fill between walls 100 and 102	-	-	-
W	104	Wharf surface	Surface	5.2	-	-	Loose black industrial waste deposit capping 102 and 103. 40-100mm thick.	Dibbs' wharf surface associated with 105.	-	-	-
W	105	Boundary wall	Structure	5.2	-	-	Single course of sandstone blocks on top of 103 and 104. 220-310mm high, 480-580mm wide.	Sandstone dividing wall/property boundary.	-	-	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
X	106	Clean-up	Fill	5.1	-	-	Clean-up within Langford's footings.	Clean-up within Langford's House footings	-	-	-
X	107	Langford's House	Structure	3.2	-	-	4 sandstone walls, varying in construction and size. Sandstone blocks measure 590 x 330 x 130mm on average. Longer walls run NW-SE (N wall 9790mm long & S wall 9660mm long) traversed by two walls that abut bedrock to north (W wall 42700mm long, E wall 4570mm long). North wall extends beyond East wall and into the Hickson road LOE.	Sandstone foundations of Langford's house. Number assigned to whole structure.	Constructed in two phases.	-	-
X	108	Demolition fill	Demolition deposit	5.1	-	-	Moderately compact, mid-brownish yellow coarse silty sand with frequent whole and broken SS bricks, sandstone fragments and fine shell lime mortar fragments. Mostly machine excavated.	Demolition deposit from Langford's house	-	-	109
X	109	Occupation deposit	Underfloor	3.2	-	-	Compact, soft mid-brown grey silty sand fill in North corner of 107, directly above bedrock.	Possible occupation/underfloor deposit due to quantity of artefacts. Artefacts present are typical of underfloor deposit.	-	108	117
X	110	Bedrock cut	Cut	3.2	-	-	Large rectangular cut into bedrock running NE-SW with pick marked vertical sides and undulating base. Contains fill 107 and associated fills with Langford's House. Cut has been hand excavated. Multiple fills (108, 109) in crevices.	Cut for the construction of Langford's house, either to create a level construction surface or check the soundness of the sandstone.	Likely truncated by the construction of Hickson Road.	107	112
X	111	Service trench	Service trench	4	-	-	Rectangular cut into bedrock running NE-SW, at the northern end of Area X. The northern side is natural, whilst southern side (vertical with 50mm ridge, 680mm from top) is distinctively worked. Cut continues to NE LOE and from northern LOE to service trench cut. Filled with sandstone rubble, the same as the fill to the southwest of cut.	Service trench cut into bedrock, likely for installation of sewer	-	-	-
X	112	Bedrock	Bedrock	1	-	-	Sandstone bedrock throughout Area X. Some natural shaping with deep fissures, natural divots and changes in level. Oyster shells found attached around wreck 140. Bedrock has been modified in places (e.g. 110, 111).	Bedrock	-	-	-
X	113	Service trench	Service trench	6	-	-	Service trench running E-W at the northern end of Area X. Trench cut into bedrock (112) for ceramic waste-water pipe. Vertical sides; base not reached at depth of 1090mm, and continues east beyond LoE. Loose fill of sandstone rubble and mixed sands (coloured mid-light brown, yellow and pink). Pipe is a red-purple colour, with vertical pipe situated at edge of bedrock and a horizontal pipe continuing east. Seen in north-west facing section of bedrock (112).	Service trench cut in bedrock for waste water pipe. Possibly associated with cut in bedrock (111) which extends from the vertical pipe to the north-east.	Water flowed east to west, possible related to cut 111, continues beyond LoE to the east.	-	-
X	114	Clyde Street curbing	Structure	5.1	-	-	SW-NE running line of sandstone blocks, mostly single course, with two courses at NE end. Comprised of neatly worked rectangular blocks, which are mostly smooth (though some pick marks are present). Sandstone blocks measure 700 x 450 x 270mm. Sitting above brown sandy fill (115), possible fill for Clyde street construction (114).	Western curbing of Clyde Street. One block has a curved upper edge - possible reused step.	-	-	115

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
X	115	Construction fill	Construction fill	5.1	-	-	Loose brown sandy silt fill with some SS brick, abutting the bedrock to the NE, South & SE. Continues in the NE right up to the bedrock. Multiple fill events enclosed including a dark brown silt and yellow sand.	Construction fill for Clyde Street.	-	114	-
X	116	Cut	Cut	3.2	-	-	SE-NW running shallow rectangular cut with vertical sides, and flat base with chisel marks filled with brown sand with few inclusions. Fill is same as what seen in remainder of room 109. Cut more shallow at the south-east end (50mm deep) and deeper at the north-west end (90mm deep).	Cut into bedrock within Langford House, unknown purpose.	-	109 (?)	-
X	117	Cut	Cut	3.2	-	-	E-W running shallow rectangular cut with vertical sides and flat base, located 1.3m west of 116.	Possible base for post relating to Langford's house.	-	109	112
X	118	Levelling fill	Levelling fill	3.2	-	-	Compact, thin (8-15mm) sterile black sand patch with no inclusions (770 x 550mm). Found beneath demolition filling fissures in bedrock. Only observed as actual layer in this location, however a black line can be seen to continue westward along bedrock section. Fill slopes down gradually to the west.	Levelling fill	-	108	119
X	119	Levelling fill	Levelling fill	3.2	-	-	Loose light to mid brown sterile sand accumulation in bedrock fissure along northern wall of Langford's house	Levelling fill or possible drainage run off.	-	118	-
X	120	Cut	Cut	3.2	-	-	Circular cut with gently sloping sides towards a relative level base with very visible pick marks 480-490mm diameter, 260mm deep. Cut into bedrock and cut 130 runs into it.	Cut for possible water management feature, i.e. sump?	-	121	110
X	121	Cut fill	Fill	3.2	-	-	Grey fine sand with lenses of grey sandy clay with charcoal/black organic inclusions.	Fill of cut 120, water laid sediment.	-	122	120
X	122	Cut fill	Fill	3.2	-	-	Fine relatively sterile yellow to light grey sand with some charcoal and gravel inclusions	Fill within cut 120	-	-	121
X	123	Channel fill	Fill	3.2	-	-	Sticky compact grey silty clay with black/rust red lensed gravel inclusions in lenses. Contained by cut 130. Lense of grey sticky clay on top, then a lense of well-sorted gravel followed by soft grey sand at the base.	Fill within channel 130, appears to be natural accumulation within 'guttering' 130.	Similar to lenses of fill 121 within cut 120, which the eastern gutter appears to run towards.	108	130
X	124	Occupation Deposit	Underfloor	3.2	-	-	Compact brown sand with common fine charcoal flecks and occasional sub angular sandstone flecks. Found between bedrock and southern 107, truncated by contamination trench.	Occupation/underfloor deposit.	Concentration of copper nails in east end.	126	107
X	125	Fill	Fill	3.2	-	-	Loose light brown silty sand with few large sandstone pieces (50-70mm) and few SS bricks and high concentration of artefacts.	Fill within possible repair or extension cut for 107.	-	-	129
X	126	Levelling fill	Levelling fill	3.2	-	-	Compact silty clay lensed by light grey clay and bright orange clay with 40% mortar inclusions, charcoal flecks and small sandstone (<10mm in size). Abutting the East-West wall (107) internally, running alongside it for 1710mm.	Construction or levelling fill deposited during house construction (Langford's house). Cut by 129 - likely for repairing the wall.	-	125, 129	124

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
X	127	Sawshed footing	Wall footing	4	-	-	NE-SW running Sandstone wall; 2-3 courses, 2 rows wide, blocks not cut uniformly with size variance; yellow-white mortar bonding. Connected to bedrock (112) at NE end; SW end disturbed. Abutted by 128. Multiple service cuts at the SW end, one located 2800mm from the south-west end and cuts the wall 1100mm. Slopes downwards to the south-west.	Eastern wall of Cuthbert's sawshed. Possible paving.	-	179	-
X	128	Sandstone platform	Structure	4	-	-	Rectangular structure built of large, roughly hewn sandstone blocks with a white shell lime mortar. Blocks have an average dimension of 1 x 1m, and are 300-500mm thick.	Sandstone platform within Cuthbert's sawshed (127).	-	179	-
X	129	Repair cut	Cut	3.2	-	-	Rectangular cut in SW corner of Langford's house. Only evident in the west facing section which is vertical, elsewhere limited by 107 and 112.	Repair to 107 or new extension.	Not fully excavated due to depth of sandstone walls (107).	125	126
X	130	Drainage channel	Cut	3.2	-	-	Linear hand carved cut running along the base of 110 for guttering. 2 channels - one runs NW-SE into 120 and the other SW-NE into 120. North channel is 60-80mm wide, 1.8m long and 50-70mm deep. East channel is 160-190mm wide, 2.5m long and 50-180mm deep.	Potential attempt at drainage for Langford's house. However, seems quite ineffectual, as drains only have slight angles. Moreover, light rainfall during excavating led to water silting up drains quickly.	-	108, 123	110
X	131	Bearers	Bearer	3.2	-	-	3 evenly spaced sandstone blocks, running parallel to front (southern) wall (107). Average size of blocks is 500 x 400 x 140mm. The blocks are set 180-220mm from 107 and are ~1700mm apart.	Three sandstone support or bearer blocks in Langford's House.	-	108	124
X	132	Intertidal sands	Deposit	3.2	-	-	Loose yellow intertidal sand with no inclusions below rubble fill (115). Spans from bedrock in the east to 114. Overlays black/grey sand (133). Assumed to extend north-east and west.	Intertidal sands.	-	115	141
X	133	Intertidal sands	Deposit	3.2	-	-	Soft, dark grey sand with mica. Inclusions of rare fragmented shell, as well as very rare small white sandstone brick fragments (<20mm). Exposed by machine.	Intertidal sands. 132 and 133 represent same event but are separated by tidal zones.	Below harbour sands, timber boat remnants exposed to immediate south of Langford's house/Cuthbert's boat shed.	115	141
X	134	Beach sands	Deposit	3.2	-	-	Loose, yellowish grey silty sand with very rare (<1%) flecks of black and brown stone (<5mm in size). This fill abuts the sandstone footings of 107, and is also abutting bedrock, where it is higher in places.	Beach sand accumulation abutting the verandah of Langford's house.	-	135, 249	112
X	135	Reclamation fill	Reclamation fill	3.2	-	-	Loose, mid-grey sand with large sandstone fragments (100-250mm wide on average), and some SS bricks. Fill extends from sandstone footings southwards, beyond LoE. Context has not been fully excavated, but was removed along the SE/NW wall of Langford's verandah.	Reclamation fill, likely used to infill wharf.	Along with 136, represents phases of wharf construction in front of Langford's house.	-	134

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
X	136	Construction fill	Construction fill	3.2	-	-	Moderately compact, mid-grey coarse sand. Inclusions: common sandstone pieces (300-400mm in size), occasional sandstone brick fragments, occasional charcoal flecks and very frequent crushed white sandstone and crushed red sandstone brick fragments (<40mm in size).	Construction fill used to infill the foundations of the house and create a level construction surface.	-	108	134
X	137	Modern Hickson Road	Surface	7	-	-	Modern road surface overlying 138. Runs north to south, but has been cut within Area X for excavation.	Modern Hickson Road surface.	-	-	138
X	138	Telford paving	Surface	6	-	-	Telford surfacing of sandstone rubble. Used to support road surface, however, no surface remains. Overlaid by concrete foundation of modern Hickson road. Sandstone size is on average 190 x 120 x 100mm. Overlying brown rubble fill. Covering entire area, >11000mm wide - only seen in south facing section of Northern LoE. Depth 260mm.	Telford paving, earlier phase of Hickson Road likely 1900s, truncated during later resurfacing.	-	137	-
X	139	Wall extension	Wall footing	3.2	-	-	NW-SE running sandstone wall addition/extension, with some tool marked rectangular blocks in 3 courses. Bottom course made of larger sandstone blocks, in comparison to smaller upper two courses. The wall abuts Langford's house in houses' southern area, and is built upon a light to mid yellow-brown sand, which has more inclusions of sandstone chunks in its south-east end. Wall continues further south-east but is obscured by Hickson road.	Wall extension to Langford's house.	-	-	160

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
X	140	Boat	Structure	3.2	-	-	<p>The following six components of the boat wreck were identified:</p> <p>HULL PLANKING (longitudinal objects): Six planks survive on port side of hull, one very partial remnant. From uppermost plank to suspected keel on port side is 910mm at its widest. Starboard side of boat, where 12 planks survive, has greater level of preservation, owed to apparent angle the wreck was lying at, on its side. Hull appears two planks thick on edges (whether from collapse or actual overlapping is indeterminable). Where visible, planks overlap by an estimated 100mm. From uppermost plank to is suspected keel on the starboard side is 1920mm at its widest.</p> <p>KEEL: The keel is an estimated 9000mm from stern to bow. Maritime archaeologists advised that keel is constructed from one piece of timber and hull planking fans out from it.</p> <p>RIBS/FRAMES (latitudinal objects): The ribs and frames of wreck, like hull planking, indicate a haphazard construction style. Three different types of frame/rib/support attached to the hull planking and/or keel.</p> <p>STERN POST: Situated at the stern end of wreck, on port side, in line with keel. Made up of 4 (though possibly more) laminated pieces of timber.</p> <p>BOW: The bow is heavily degraded. A copper and iron fastening is visible.</p> <p>CEILING PLANKS: Nine ceiling planks observed in situ once loose timbers removed. These planks were an average of 4500mm long, 200-220mm wide and 5mm thick. The ceiling planks did not extend far into stern or bow, and were mainly isolated to mid-ship (primarily on the starboard side). Ceiling planks sitting flat in base of wreck sealed the best example of a potentially intact bilge deposit.</p>	<p>Boat wreck beneath 132 and 133.</p> <p>The keel's location in comparison to the hull planking, and to what has been identified as the stern post, is the main reasoning for interpreting the wreck as laying partially on its side.</p> <p>The bow is heavily degraded - out of the entire wreck it would have spent the most time out of the water, and has also been affected by the construction of the saw shed. A copper and iron fastening is visible - considered strange as the two metals do not do well alongside each other and can degrade/weaken very quickly.</p> <p>The thinness of the ceiling planks, combined with the weight of timbers and fills above, warped the planks, so that they were shaped to the frames beneath them.</p>	<p>N.B. Context 140 describes the boat wreck within Area X. The number corresponds to the timbers interpreted as in situ or part of the original boat. Floating loose timbers were numbered separately as context #148.</p>	-	-
X	141	Deposit	Deposit	3.2	-	-	<p>10mm-thick lens of fine clay particles, organics and timber splinters. Deposit has very little sand content, is patchy and occurs within wreck, "sealing" the sands that contain timber elements. Only occurs above high water mark within wreck, with small patches on the sand west and south of the stern.</p>	Thin clay deposit, top layer within boat wreck.	-	132, 133	142
X	142	Deposit	Deposit	3.2	-	-	<p>Pale grey, largely homogenous accumulation of medium-grained sand, washed in and around loose timbers 148, above ceiling planks. Heavily iron oxide stained above high water where it blends into 132. Within wreck it is 100-200mm thick.</p>	Intertidal sands washed into wreck 140 and around loose timbers 148, above ceiling planks. Likely contemporary with 152, 153, 156.	-	141	144, 152, 153, 156
X	143	Fill	Fill	4	-	-	<p>Sandstone rubble fill within service cut 111 for stormwater (above 132)</p>	Fill of service cut 111.	-	132	111

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
X	144	Deposit	Deposit	3.2	-	-	Sticky mix of iron oxide, timber splinters, other organic matter and fine clay particles. Adhered to hull timbers.	Thin deposit washed into boat and settled on sides of hull.	-	142	-
X	145	Wharf wall	Seawall	3.2	-	-	Irregularly sized and poorly aligned wall of 3 courses, comprised of 13 sandstone blocks in upper course. Extends S-W, off alignment with Langford's property boundary. Blocks range in size from 470 x 230mm to 820 x 400mm. The line of stones extends 14.9m into harbour, though there are gaps where some stones have been removed. In northern end, it appears to abut/use bedrock, as is also seen in the centre, just east of the midship of the boat.	Wharf wall. Fill excavated between this wall and western wall of 161 suggests that wall 145 was possibly the same height as the sea wall (161). The boat (140) is found min. 260mm to the west of this wall, and possibly impacted on its preservation.	-	-	-
X	146	Fill with timbers	Fill	3.2	-	-	Fill including timber knees, planks and shaped pieces. Timber knees appear to be unused stock. The two largest are split from approximately 400mm trunk, quartered, then hewn to size to match the branch. Knees A and B demonstrate this more clearly. Knee C is cut from a tree with a trunk of a smaller diameter. The purpose of knee d) is unclear, as full trunk diameter remains with bark in situ. Some tool marks evident on flat surface of the worked trunk areas on knees A and C. The face of knee B's trunk has been broken away longitudinally. Knee D does not appear to be a 'trunk and branch' composition, instead it seems like a curved continuous trunk/branch.	Fill with timber knees deposited/discarded to south of Langford's House. Timbers likely were remnant shipbuilding parts.	-	135	134
X	147	Clean-up	Fill	3.2	-	-	Unprovenanced finds in machine removed fill south of 107.	Clean-up given for unprovenanced finds.	-	-	-
X	148	Loose timbers	Structure	3.2	-	-	Loose timbers from within boat 140, above the ceiling planks.	Loose timbers dumped into boat 140, unrelated to structure of vessel.	-	142	-
X	149	Deposit	Deposit	3.2	-	TT6	Dark grey sands with organic lenses of silty material - silt content increases with depth. Artefact rich, with well-preserved organic material. >300mm thick. Occurs below 132 on the eastern side of the wreck 140, and has built up against the wall of Langford's c. 1850s wharf.	Intertidal deposit and run off from Clyde Street.	-	132	249
X	150	Clean-up	Fill	3.2	-	-	Clean-up around sands 132 south of boat 140	Clean-up	-	-	-
X	151	Bilge deposit	Deposit	3.2	-	-	Clayey bilge deposit observed between frames at the stern of boat (140). Deposit is a fine-grained light-mid grey sticky clayey consistency. May have been disturbed/contaminated.	Occupation deposit between frames at stern of 140.	-	-	140
X	152	Deposit	Deposit	3.2	-	-	Clayey deposit above ceiling planks in the middle of the boat wreck (140). Mid to dark grey fine sticky/sludgy clay; 5-10mm thick above ceiling planks of 140 midship.	Clayey bilge deposit above ceiling planks in the middle of 140. Not in situ - deposits 152, 153 and 156 are considered a result of the under plank deposits being stirred up and redeposited above the ceiling planks.	Not in situ.	142	-
X	153	Deposit	Deposit	3.2	-	-	Clayey deposit above ceiling planks, observed at the bow of the boat wreck (140). Mid to dark grey fine sticky/sludgy clay.	Clayey bilge deposit above ceiling planks near the bow of 140. Not in situ - deposits 152, 153 and 156 are considered a result of the under plank deposits being stirred up and redeposited above the sealing planks.	Not in situ.	-	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
X	154	Bilge deposit	Deposit	3.2	-	-	Clayey (bilge) deposit below ceiling planks at the middle of the boat wreck (140). Dense, largely homogeneous brown fine clay with lenses of black silt with some grey silt and sandstone fragments. May be contaminated/disturbed.	Clayey bilge deposit below ceiling planks in the middle of 140. This clayey deposit is considered to be in situ.	In situ.	-	-
X	155	Bilge deposit	Deposit	3.2	-	-	Clayey (bilge) deposit below ceiling planks at the bow of the boat wreck (140). Dense, largely homogenous brown fine clay with lenses of black silt with some grey silt and sandstone fragments. May be contaminated/disturbed.	Clayey bilge deposit below ceiling planks at bow of 140. Clayey bilge deposit below ceiling planks in the middle of 140. This clayey deposit is considered to be in situ.	In situ.	-	-
X	156	Deposit	Deposit	3.2	-	-	Clayey deposit above ceiling plank, observed as a 5-10mm layer at the stern of the boat wreck (140). Mid to dark grey fine sticky/sludgy clay.	Clayey bilge deposit above ceiling planks in the middle of 140. Not in situ - deposits 152, 153 and 156 are considered a result of the under plank deposits being stirred up and redeposited above the sealing planks.	Not in situ.	-	-
X	157	Bilge deposit	Deposit	3.2	-	-	Dense, largely homogenous brown fine clay with lenses of black silt, observed between ceiling planks and hull at bow of boat wreck (140).	Intact bilge deposit beneath ceiling planks 150-153 at bow of 140.	In situ.	-	-
X	158	Bilge deposit	Deposit	3.2	-	-	Dense, largely homogenous brown fine clay with lenses of black silt, observed between ceiling planks and hull at midship (boat wreck 140).	Intact bilge deposit beneath planks 150-153 at midship of 140.	In situ.	-	-
X	159	Bilge deposit	Deposit	3.2	-	-	Dense, largely homogenous brown fine clay with lenses of black silt, observed between ceiling planks and hull at stern of boat wreck (140).	Intact bilge deposit beneath ceiling planks 150-153 at stern of 140.	In situ.	-	-
X	160	Levelling fill	Levelling fill	3.2	-	-	Dense light to mid-yellow sand with large (>100mm) sandstone chunks. Slopes drastically from north to south with mixed rubbish fill on top from old service (cut through 107). Some infrequent inclusions of charcoal and degraded metal. Wall 139 sits above this densely compacted fill. Area highly disturbed and contaminated.	Sand fill used as foundation for wall 139 - extension to Langford's house. Possibly affected by tidal activity.	Largely unexcavated and no artefacts kept due to contamination.	135, 139	-
X	161	Wall foundations	Wall footing	3.2	-	-	Three connected sandstone walls (E, W & S). W= 4.95m L, 0.52-0.58m W, 1.70m H; 9 courses. S= 8.30m L, 0.80m W, 1.20m H; 6 courses. E= 4.70m L, 0.81m W, 1.04m H; 6 courses. The foundations form part of the structure number 107 given to Langford's House. Complex and varied construction including reused pieces and multiple variations in style and preservation.	Sandstone wall foundations of Langford's House 107.	-	-	-
X	162	Internal footing	Wall footing	3.2	-	-	Internal wall footing, second phase of construction of Langford's 107. 8.2m length. Five courses exposed (1230mm) and up to four stones wide in parts (500-600mm). Small blocks formed the upper 2-3 courses and the lower 2 were made of much larger blocks. Sandy mortar bonding.	Internal wall footing, second phase of Langford's 107.	Not keyed into the foundation proper 161 of Langford's House, but rather abutts.	-	-
X	163	Clean-up	Fill	3.2	-	-	Clean-up around boat 140	Clean-up around the boat 140	-	-	-
Y	164	Clean-up	Fill	6	-	-	Clean-up south end of Area Y, in rubble beneath Hickson Road.	Clean-up	-	-	-
Y	165	Clean-up		5.1	-	-	Clean-up north end of Area Y in sands beneath sandstone rubble, post machining.	Clean-up	-	-	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
Y	166	Sandstone paving	Paving	4	-	-	Line of sandstone paving consisting of sub-square/rectangular blocks (ranging in size from 600x1100mm to 630x760mm) with a relatively flat surface but some undulations. Packed either side by 167. Bonded with a cream shell and sand mortar (same as 169).	Sandstone paving within Cuthbert's sawshed, part of surface along with 167 and 128. Appear the builders did not trust the integrity of the bedrock they were built on, as blocks were used to fill in a dip in the bedrock and to flatten the surface.	Fills in a dip in the natural bedrock paving extends under and is keyed into 169.	179	-
Y	167	Surface	Surface	4	-	-	Sandstone rubble and cream shell sand mortar packed floor surface. Relatively flat with undulations. Charcoal flecks within the mortar throughout with increases in E part. Sandstone rubble ranges in size from 50-400mm and varies in shape from angular to sub-rounded.	Packing surface above bedrock to level Cuthbert's sawshed, part of platform created with 166 and 128.	-	-	-
Y	168	Bedrock wall cut	Cut	4	-	-	NE-SW, turning NW-SE running cut in bedrock adjoining 127. Pick marks visible on vertical side.	Bedrock wall cut forming part of the eastern wall of the sawshed. Possibly originally an overhang modified to suit the needs of the building.	Reduced in size during the construction of Hickson Road.	179	-
Y	169	Internal sawshed wall	Wall footing	4	-	-	Dog-legged NE-SW sandstone block wall, associated with Cuthbert's saw shed. 2-3 courses with upper course of ashlar stones with beveled edge on exterior face. Lower courses more roughly worked. Overlaid in places by other constructions, and abutted by 175 sandstone wall with bricks (170) laying directly atop north-eastern most stone.	Internal wall in Cuthbert's sawshed, bounding the platform 167, 166 and 128.	-	179	-
Y	170	Brick feature	Structure	5.1	-	-	Purple SS brick feature in NE corner of working level 1, rear of Cuthbert's sawshed. Constructed in two phases on the basis of mortar used. The second phase overlays the first. 1st phase - minimum of 4 courses with thick friable yellow shell mortar. 2nd phase - firm grey concrete mortar.	Unknown purpose, though likely part of the industrial activities occurring in the area and possibly was part of a structural brick pad to support machinery	-	179	166, 167
Y	171	Bedrock	Bedrock	1	-	-	Sandstone bedrock that has been heavily modified under umbrella context 183. In places it has been cut down and shaped, whilst in other places crevices have been filled in.	Bedrock	-	-	-
Y	172	T-shaped cut	Cut	4	-	-	T-shaped cut into bedrock (171), vertical sided with pick marks and notches in the NW end. 173 abuts the cut to the south.	T-shaped cut, part of channel 1, that likely acted as a machinery pad for the industrial activities in this area. Cut to enable leveling and strengthening of bedrock via construction of 173.	Forms part of working level 2.	174	171
Y	173	Channel 1 walls	Wall footing	4	-	-	NE-SW running collection of sandstone walls, beginning in north at cut bedrock. Total size 4.73 x 1.67m - 360mm high. Western structure has 2 courses in North and 1 in South. E structure mimics W. Central structure forms a channel between. High shell mortar used in all.	Wall footings of channel 1, possible engine mount structure, formed from modifying the bedrock and building a platform.	Forms part of working level 2.	174, 179	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
Y	174	Channel 1 fill	Fill	4	-	-	Three fills top to bottom, comprised of: 1) 70mm of dark grey brown with some charcoal and crunchy inclusions 2) Very thin -5mm layer of humic/organic dark material 3) 10mm layer of sticky yellow orange material.	Fill of channel 1 formed by 173 and 172.	-	179	173
Y	175	Sawshed footing	Wall footing	4	-	-	Combination of sandstone blocks and rubble with multiple building techniques to form a foundation for wall construction. Appears to have been disturbed on the northern/western side and heavily truncated from above by two constructions of Hickson road. On the NW side, foundation sits over levelling fill 184.	Rear/northern foundations of Cuthbert's sawshed.	-	179	171
Y	176	Retaining wall/seawall	Retaining wall	3.2	-	-	Long (20.5m) N-S running sandstone wall with two shorter E-W running walls extending from its eastern face. 5 courses at the northern end, 3 at the southern. N-S wall consists of worked rectangular and square blocks, some with tool marks. Blocks measure between 260 x 260mm and 1080 x 300mm in size. West face shows clean cut blocks but no mortar. Northern E-W wall measures 3500 x 1300 x 700mm. Southern E-W wall measures 4100 x 800 x 600mm. Both the Northern and Southern E-W walls share the same haphazard construction, with angular to rectangular stones.	Footings acting as a seawall and a retaining wall for the Clyde Street buildings.	Originally considered to be part of 193. Later clarified they are two separate walls abutting each other.	-	-
Y	177	Modern Hickson Road	Surface	7	-	-	Modern Hickson Road surface overlying 178 (Telford road surface from 1900s). Both make up Hickson Road - same as 137 in area X.	Modern Hickson Road surface.	Also located in Area Z with shared context number.	-	178
Y	178	Telford paving	Paving	6	-	-	Telford sandstone paving rubble without original surface, used to support road surface. Overlaid by concrete foundation of modern Hickson road surface. Average stone size of 190 x 120 x 100mm.	Telford paving, support surfacing of 1900s Hickson Road.	Original surface removed during construction of modern road. N.B. Also located in Area Z with shared context number.	177	179
Y	179	Levelling fill	Levelling fill	6	-	-	Mixed brown sandy soil with sandstone rubble covering the whole of area Y. Sandstone rubble ranges from 200 x 200 x 200mm to 500 x 500 x 300mm.	Bedding fill for laying of Telford paving		178	174, 175, 180
Y	180	Levelling fill	Levelling fill	5.1	-	-	Yellow orange medium grained sand with frequent -50-100mm pieces of sandstone rubble. Layer is 150-300mm thick.	Crushed sandstone levelling fill to build up area.	Located in north end of area Y possibly disturbed by services in the south end.	178	182
Y	181	Levelling fill	Levelling fill	5.1	-	-	Mixed yellow and brown medium sand with lenses of brown and orange sand, as well as lenses of grey sticky clay. 200-300mm thick layer, relatively flat and even.	Reclamation fill	-	180	182
Y	182	Possible surface?	Surface	5.1	-	-	Patchy dark "crunchy" industrial fill to the NW of 176 - patches around 400x700mm and 50mm+ thick.	Reclamation fill or potential remnant of working wharf surface.	Found to the NW of 176	180	181

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
Y	183	Industry specific structures	Structure	4	-	-	Multiple industry specific structures - bedrock is used/modified and bolstered to build the structures, and the stonework has been cut and shaped to fit the crevices or levels of the bedrock.	Umbrella number assigned to all industrial structures within sawshed that feature modified bedrock in Area Y. Indicative of engineering that responds to the topography of the area.	-	-	-
Y	184	Levelling fill	Levelling fill	4	-	-	Firm, grey brown sand with small yellow/red sandstone rubble inclusions contained by bedrock in the E, S and W, and by construction.	Construction/levelling fill for Cuthbert's sawshed between the bedrock. Assumed to be earliest phase of construction, predating the sawshed.	-	179	171
Y	185	Western wall of channel 3	Structure	4	-	-	NE-SW running partial sandstone wall in the west of Cuthbert's sawshed. Two irregular courses of roughly hewn blocks. Disturbed at both ends. Shell-rich, white mortar which extends over the top of the uppermost course.	Western wall of channel 3 in Cuthbert's sawshed	The shell-rich white mortar bonding also covers top of wall, which indicates possible upper courses.	179	-
Y	186	Channel wall	Structure	4	-	-	Highly disturbed sandstone blocks and modified bedrock in SW corner of area Y. The disturbance is particularly noticeable on northern and southern ends, as well as by SE-NW running service cut. Includes patches of highly compacted red and orange speckled clay just north of service cut, as well as brown-black industrial waste in the southern area between blocks of wall (185).	Eastern wall of channel 3 and western wall of channel 2.	Forms part of working level 2.	179	-
Y	187	Reclamation fill	Reclamation fill	3.2	-	-	Mixed brown sand rubble fill, with multiple varying sized sandstone pieces including some slightly worked pieces. The larger pieces of sandstone measure 100 x 100-700 x 800mm.	Reclamation fill to consolidate ground between bedrock and wall 176. Filled after construction of 176 and 191.	Cut by service pipe.	179	171
Z	188	Brick structure	Structure	5.1	Space 1	-	U' shaped SS brick structure in the south of Area Z. Bedrock incorporated into construction in SE and NW corners. Orange, red and cream bricks (measuring 230 x 110 x 70mm) with cream lime and shell mortar. Rectangular frogs present on bricks, measuring 120 x 40mm in size. Bricks bonded in English style. Between 11 and 4 courses. 3.50x1.84m.	Possibly a small cellar in the stores, or cesspit. Later reused as a possible light well in Phase 5.2 for the beer cellar in Area Z.	Possible different phase of bricks parallel to the inner west wall, bonded with cement mortar numbered as 240.	237	199
Z	189	Construction cut	Cut	5.1	-	-	Construction cut for sandstone brick structure at north end of area Z, NW of 176. Cut is wider towards surface (surface created by construction of Hickson Road) at 90mm, 30mm below this. Cuts 180, 181 maybe truncated by 189.	Construction cut for brick structure 188.	-	190	180
Z	190	Fill of cut 189	Fill	5.1	-	-	Mid brown/buff maxed sandy fill with broken SS brick inclusions, within cut 189.	Fill of cut 189.	-	-	-
Y	191	Retaining wall/foundation	Retaining wall	3.2	-	-	L'-shaped sandstone block platform, north of 175. Constructed from various sized blocks (ranging between 250-800mm), and abutting bedrock - appears to be cut and sloping NE to SW. On west-facing wall of the 'L'-shape, wall is 4 courses deep. Brown sand fill between the sandstone and bedrock. N-S extension measures 3500 x 1000 x 1200mm, with the E-W extension measuring 2600 x 1140 x 270mm.	Retaining wall/foundation for houses on Clyde Street. Early construction platform which allowed for building on top.	Brown sand fill and sandstone rubble appears to have been used to level this area, in order to create a platform on which to build rough and unhewn sandstones.	-	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
Y	192	Clean up	Clean up	4	-	-	Clean up around bedrock and wall 176, relates to remains of reclamation fill 234.	-	-	234	171
Y	193	Eastern footings of stores	Wall footing	5.1	-	-	20.50m long N-S running sandstone wall, abutting and parallel to 176.	Eastern wall footings of stores	-	-	-
Z	194	Clean-up		6	Space 1, 2, 3	-	Clean-up in Area Z, spaces 1, 2 and 3. Includes pockets of 204. Large amount of DP brick found in SE corner of space 3.	Clean-up post machining.	-	-	201
Y	195	Reclamation fill	Reclamation fill	4	-	-	Flat and compact mixed sandstone and sand fill in the northern end of area Y.	Reclamation fill in Area Y associated with Cuthbert's reclamation	Sand (181) overlies 195, likely as an accumulation from works or wash from down the hill.	181	-
Z	196	Cellar	Structure	5.1, 5.2	-	-	Sandstone/brick structure at the N end of 'Sharks Fin'. Extends across all Area Z. Comprised of well made sandstone/ SS brick and DP brick walls, and cement and DP brick floors. Two construction phases.	Umbrella number assigned to the beer cellar on Dibbs' wharf	Split into 3 arbitrary spaces to aid recording (1-3, N-S).	204	-
Z	197	Southern cellar footings	Wall footing	5.1, 5.2	Space 1	-	Sandstone Wall - SE-NW delineation extends for 9840mm, then turns to S-W with a 90 degree turn for 2340mm, finishing along the same delineation as the longer section of wall. Large sandstone blocks measure 80 x 470 x 290mm, and are one row deep and at least three courses high.	Southern wall footings of cellar structure 196.	Partially covered with SS bricks on west side on longest section. Render on SW running section.	204	-
Z	198	Western cellar footings	Wall footing	5.1, 5.2	Space 3	-	9.13m long NE-SW running Sandstone wall with a 2.94 x 2.78m brick lined room, extending to the west towards the northern end. 1-2 rows, 5 courses high. Average sandstone size is 590 x 460 x 290mm. Rubble between facing stones. Damp coursing between fine white mortar.	Western wall footings of cellar structure 196.	-	204	-
Z	199	Bedrock	Bedrock	1	Space 1, 2, 3	-	Sandstone bedrock modified under umbrella context 196. Cut by large circular feature - 206. Other areas contain modification.	Bedrock in Area Y	-	-	-
Z	200	Brick paving	Paving	5.1	Space 1, 2, 3	-	Dry-pressed brick paving of 196, laid in stretcher bond running NE-SW to the south and north, and running NW-SE in the centre. Becomes irregular to the west of 196. Irregular brick pads constructed.	Brick paving for 196, part of first phase of building	Multiple irregularities and changes in direction	-	-
Z	201	Cement surface	Surface	5.2	Space 1, 2, 3	-	Compacted, cream sand soft cement surface atop 200, found in areas 1, 2 and 3 within structure (196). Cracked and collapsed in places, with a clear water issue. Cut by a number of postholes (209-212), and has timber beams (202) overlaying it. 10-30mm gravel between 201 and 200 in places. Cement 10-80mm thick.	Cement surface of second phase of occupation of cellar 196	-	202	200
Z	202	Timber beams	Structure	5.2	-	-	16 variously sized timber beams sitting on cement surface (201). Oriented NE-SW, with irregular spacing. The timbers range from L 450-5180mm x W 60-230mm x D 10-100mm.	Timber beams either to facilitate above-floor storage, or as props.	-	204	201

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
Z	203	Drainage channel	Drain	5.1	Space 3	-	Cemented drainage channel leading to sump 255 in north of Area Z. Northern wall made from shaped bedrock. Southern wall from corrugated iron 253 supporting 201 cement. Western wall formed by 198. East wall removed by Hickson Road. Stained black by 205. Brittle surface. The sump comprises of 3 timber beams, identical in size and shape.	Drainage channel leading to sump 255, relating to the industry occurring in Area Z.	During excavation, the sump and drain filled with water.	205	-
Z	204	Demolition/levelling fill	Demolition deposit	6	Space 1, 2, 3	-	Mixed fill covering 196 and associated features beneath Hickson road. Includes black crunchy material, yellow sandstone crush and mixed rubble. Tip lines visible in section.	Backfill of structure (196).	Machine excavated. Cut by modern services.	179	202
Z	205	Drain fill	Fill	5.1	Space 3	-	Compact dark brown/black sandy clay, with a large numbers of artefacts. Comes down onto possible sump (203).	Fill of drain 203, likely deposited waste within a basement structure, deposited into a sump 255/drainage channel (203).	-	204	203
Z	206	Cistern	Cistern	3.2	Space 3	-	Vertically-sided, roughly circular cut into the bedrock with pick marks along the sides. Notches in North and South parts of walls are visible, which are seemingly opposite one another, though mostly fractures in the bedrock. Not truncated. Top layer of fill is industrial boiler ash, with a sandy-silt layer with sandstone rubble underneath (208). Located on bedrock (119) or area Z.	Hand carved cistern. Well/cistern cut by hand, with evidence of pick marks. Potential aid of explosives evident from a series of 6 curved grooves cut into the northern side.	-	215	199
Z	207	Fill	Fill	5.1	Space 3	-	Dark black cindery industrial boiler ash fill with abundant smaller stones, 250-280mm thick. Fill deeper in the centre of the circular cut than around the edges of 206. Walls are the bedrock that 206 cuts into. Fairly straight with visible pick marks.	Top fill within cistern (206).	-	204	208
Z	208	Fill	Fill	5.1	Space 3	-	Loose to moderately compact fill of orange sandy silt, with medium sized (30-90mm) and some larger sized (350 x 150mm) sandstone pieces.	Middle fill of cistern (206).	-	207	215
Z	209	Posthole	Posthole	5.1	-	-	PH cut: Irregularly shaped, 500 x 480mm in size, rounded corners. Cut through cement floor (201). Base unexcavated. Truncated by sewer mains running E-W. Post: Near square post. 230 x 210mm in size, sharp corners. Fair condition, but still degraded, cut horizontally. Packing: Firmly compacted packing of yellow sandstone crush and grey plastic clay. Thickness of 500 x 480mm. Excavation extent dropped by 30mm.	Posthole used as roof support, two numbers given 229 and 209	Part of postholes with large square timber posts cutting through cement floor (201). Associated with 210, 211, 212	201	-
Z	210	Posthole	Posthole	5.1	-	-	PH cut: rectangular with sharp corners, 400 x 320mm, base unexcavated. Post: square in section with sharp corners, measuring 230 x 230mm. Decaying - possibly a smaller post along south edge less decayed, and measures 100 x 100mm. Packing: mixed fill, with yellow crushed sandstone, grey plastic clay, and a cleaner beige sand. Occasional inclusions of small stones (<40mm in size). Dropped by 30-40mm.	Posthole used as roof support	Part of postholes with large square timber posts, cutting through cement floor (201). Associated with 209, 211, 212.	201	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
Z	211	Posthole	Posthole	5.1	-	-	PH cut: irregular shaped- rectangular, 500x480mm, unexcavated. Post: Near square degraded post, 230x240mm. Present, though decaying and in poor condition. Packing: firm yellow sandstone crush mixed grey plastic clay with small stones.	Posthole likely used as roof supports for cellar	Part of postholes with large square timber posts cutting through cement floor (201). Associated with 209, 210, 213.	201	-
Z	212	Posthole	Posthole	5.1	-	-	PH cut: Near rectangular, 680x300mm, 180-300mm deep. No post but sandstone block may be filling post pipe. Packing: loose yellow sandstone crush with some brown sand and frequent sandstone rubble.	Posthole likely used for roof supports of cellar 196	Associated with 209, 210, 211. Part of postholes 209, 210, 211 and 212 through cement floor 201, within paved floor 200.	201	-
Z	213	Timber post	Post	5.1	-	-	Two timber posts related to 203 sandstone structure. W post - 950mm high, 80mm from 198 with iron residue. E post - 250mm high in the middle of 20.	Timber posts for support of corrugated iron wall (potential wall or fence), relating to drainage channel and sump (203). This is evidenced by the strip of metal-stained cement that runs vertically against the sandstone wall.	-	205	-
Z	214	Bricked drain	Drain	5.1	-	-	Brick drain with 2 courses of SS brick and ceramic pipe, located at North end of Area Z and close to sump 203. Top course of brick covered by cement surface (201) with rounded edges. Fill primarily consists of brown-yellow sand. Surrounded by brick paving (200) on all sides. Brick size is 210 x 110 x 75mm. Associated lined mortar drainage channel extends to NW, and is bricked over by platform 219. Channel dimensions: 1480 x >190mm.	Brick drain connecting to pipe running SW from 203, connected to sump 255 and pipe within	Originally recorded as a post hole, revised on 12/11/18 as a drain.	201	-
Z	215	Fill	Fill	4	-	-	Loose to moderately compact grey clayey sand, with patches of degraded metal, sand and charcoal flecks. Clay content increases with depth. 390-1900mm thick.	Base fill of cistern 206	Many pieces of timber in lower parts of the fill.	208	206, 199
Z	216	Posthole	Posthole	5.1	-	-	Rectangular shaped posthole cut into block 221, straight edged 310x150-155mm, 20-50mm deep PH with flat base and sharp corners. Square (85x85mm) 25-40mm thick post pipe without post. Loose brown sandy clay packing with >50% grit, <5% wood fragments and slag.	Posthole cut into block 221, of unknown purpose.	Identical to posthole 217 which was located in the same block and approx. 650mm apart.	201	221
Z	217	Posthole	Posthole	5.1	-	-	Rectangular posthole cut into 221. A slight curve on the S end, straight edged 310x155mm, 30mm deep posthole with a flat base and sharp corners. Square (85x85mm) 40mm thick post pipe without post. Loose brown sandy clay with grit >50%, < 5% wood fragments and slag packing.	Posthole cut into 221, associated with 216 and identical to 216.	Identical to posthole 216 which was located in the same block and approx. 650mm apart.	200	221

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
Z	218	Water closet	Structure	5.2	-	-	DP brick constructed toilet block with associated brick paved floor and piping. 3.45m long with 2 cubicles. Truncated by concrete footings and modern services. The western WC was in better condition. The void in the centre measured 470 x 310mm and was at least 260mm deep. The fill was black waste/cindery fill, with occasional ceramics.	Water closet/toilet block constructed as a later addition to building with raised brick floor to cover services.	Encompasses the new brick paving and water closets in southeast corner of Area Z. Separate numbers were not given due to their contemporaneity.	251, 259	200
Z	219	Brick pad	Structure	5.1	-	-	3 various-sized, machine-made DP brick pads cut into 200, with a blue-grey concrete covering. All on slightly different alignments. The concrete is hard and almost impossible to remove by hand, and appears confined to platforms. The third pad in space 2 has been cut by the E-W running sewerage service in its northern end, leaving only the southern half remaining. The largest pad (1) has a cream cement render running up to the pad on all sides (most prominent on north, part of 214).	Three brick pads likely of industrial nature but function unclear.	Depth of pads range from 10-85mm (not including concrete). The largest pad potentially creates a sort of drainage channel.	222	-
Z	220	Brick structure	Structure	5.1	-	-	Three machine-made brick structures in space 2 and 3 along eastern side of 196. Firmly bonded bricks with both softer brown cement and harder white cement. Minimum 2 courses of bricks measuring 230 x 250 x 110-120mm.	Long, thin, rectangular pit bases along eastern side of cellar 196.	-	242	243
Z	221	Sandstone block	Structure	5.1	-	-	Single large block of sandstone at the north end of area Z, containing rectangular postholes 216 and 217. Abutted on its north by the corrugated iron of drainage channel 203.	Foundation for postholes 216 and 217.	-	201	-
Z	222	Concrete capping	Surface	5.1	-	-	Extremely hard, compacted blue-grey concrete with black flecks, overlaying brick pads (219). The concrete ranges in depth from 10-50mm. It appears to be confined to the area of the pads.	Concrete bonding and capping for brick pads (219).	-	201	219
Z	223	Brick wall	Wall footing	5.2	-	-	Machine-made brick wall abutting 198. 11 courses with white mortar bonding laid stretcher. Brick size 230 x 110 x 700mm. Single row of stretcher laid bricks, 15mm between bricks and S-E facing side of extending section of sandstone wall.	Later brick wall added abutting 198 in the northern light well. Purpose of installation unknown.	-	201	200
Z	224	Brick footings	Wall footing	5.1	-	-	NW to SE running, 6.73m long, sandstock brick wall between 188 and 197. 4 to 5 courses of brittle orange/red bricks. Damp coursing of white mortar. Abutted by 188 to the south of the eastern end of the wall. Wall delineation is NW-SE.	Likely the northern wall of the stores.	-		-
Z	225	Posthole	Posthole	5.1	-	-	Ph cut: square, right angle corners, near vertical sided, 270 x 270, 240mm deep. Post: square, right angle corners, 250 x 250mm pipe, post well preserved. No packing material, covered with render.	Likely used as roof supports for cellar building 196. Similar to post holes 211 though not in line.	Part of postholes through cement surface 201, west of space 3 near sandstone wall (198).	201	-
Z	226	Posthole	Posthole	5.1	-	-	PH cut: rectangular, right angled corners, very shallow, 320x270mm. Post pipe: Square, right angled corners, 80x80mm, 40mm deep, vertical sides, flat base, no post present Packing: Loose dark brown silty sand packing.	Posthole cut into block 228, identical to 227. Unknown purpose.	Related to 227, identical to 216, 217. Part of two postholes cut into the sandstone block (228).	201	228

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
Z	227	Posthole	Posthole	5.1	-	-	PH cut: rectangular, near right angled, very shallow, flat base, 300x160mm. Post pipe: square, near right angled, 80x80mm, no post present. Packing: Loose mid dark brown silty sand.	Posthole cut into block 228, identical to 226. Unknown purpose.	Related to 226, identical to 216, 217.	201	228
Z	228	Sandstone block	Structure	5.1	-	-	Single large block of sandstone with cyclopean concrete base, containing postholes 226 and 227. Partially covered by very hard concrete/cement. During machine excavation of TT5 - this large pad was removed. It was sitting on grey-black sands (measured 1.4m x 1m x 640mm). Base was cyclopean concrete with large sandstone chunks in the mix.	Foundation for postholes 226 and 227. Unknown purpose.	Similar to sandstone block 221.	201	-
Z	229	Posthole	Posthole	5.1	-	-	PH cut: rectangular with rounded corners, 280x255mm, bricks laid around post and sloping down towards. Post: square right angled corners, vertical sides, 260x250x240mm, post well preserved. Packing: loose brown sand packing (only partially observed due to laying of bricks around post).	Posthole used as roof support. This was given two numbers 229 and 209.	Posthole cut into brick paving (200) in north of space 2, area Z. Part of postholes 211, 210, 212 and 213.	201	-
Z	230	Posthole	Posthole	5.1	-	-	Rectangular posthole measuring 370x300mm. Cut into paving (200). Rectangular shape in plan with corners at a right angle - paving of 200 sloping down to the edges of cut. Northern edge obstructed by pipe fill. Excavated to 100mm depth as of 14/11/18. No post present.	Likely used as roof supports for the cellar building 196	Associated with 210, 211, 212, 229.	201	-
Z	231	Bedrock cut	Bedrock	5.1	-	-	Modified bedrock 199 in the north end of area Z. Contexts specifically describes the sharp face of bedrock which it is abutted by 196. No tooling marks present but the southern face is very smooth and vertical.	Used as a northern wall for 196. Though no tooling marks present, it is assumed that bedrock must have been modified in some manner.	No tooling marks, but assumed modified.	-	199
Z	232	Timber post	Posthole	5.1	Space 3	-	Well-preserved, 130x70mm flat-topped timber post with vertical sides surrounded by dark brown sand. No apparent cut. Surrounded by dark brown sand with small stone inclusions.	Located between brick paving (200) and sandstone block (221). No apparent association with other features and appears to be a lone post.	-	201	-
Z	233	Brick and sandstone wall	Structure	5.2	-	-	1.52m long E-W running, machine made brick and sandstone rubble wall. 930-970mm high; top 580mm. Regularly laid, frogged bricks, with very friable lime mortar between (averaging 235 x 115 x 65mm in size). Beneath is a slightly coursed sandstone rubble, which appears somewhat coursed and without bonding material. The sandstone blocks range between 110 x 150mm to 330 x 125mm in size. The north-facing side of the wall is plastered with cement. Located in Area Z, south of space 1 and surrounded by wall 197 to the east and west. Bricks are arranged in alternating courses.	Later addition that blocks off the inside of the southern light well in wall 197.	-	-	201
Y	234	Reclamation fill	Reclamation fill	4	-	-	Multiple mixed fills observed at the north end of area Y, south of wall 197. Includes a ceramic-rich dark fill, as well as a metal and ceramic-rich dark brown fill.	Reclamation fills.	-	181, 195	112, 171, 199

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
Z	235	Levelling fill	Levelling fill	5.2	-	-	Mixed loose brown and yellow silty sand, with sandstone rubble, charcoal flecks (1-20mm in size), DP brick fragments (up to 60mm in size), degraded sandstone, grit (1-5mm in size), and slate fragments. 10-80mm thick and contained within a room 2.30x1.30m in size.	Construction fill used to level the structure above bedrock 199, in preparation for concrete surface 236.	-	236	199
Z	236	Concrete surface	Surface	5.2	-	-	Rectangular (1300 x 2300mm) concrete surface with two post holes. Abuts 188 to the east (sandstone wall), 240 to the west (dry-pressed wall), and 224 to the north (sandstock wall).	Concrete surface within brick structure 188. Modification of room within SS wall. 3 rows, 9 course DP wall added to the east, then postholes and concrete added.	-	237	235
Z	237	Backfill	Demolition deposit	6	-	-	Mixed buff coloured, sandy fill with frequent SS brick rubble pieces, as well as some small glass fragments.	Infill/backfill event within structure 188 on the south end of area Z.	-	236	188
Z	238	Posthole	Posthole	5.2	-	-	Pair of rectangular postholes orientated NE-SW with vertical sides and filled with mid to dark brown, inclusion free sand. Both had rendered sides. Post only present in western posthole. Both measure 150 x 70mm, neither bases reached - minimum depth of 202mm.	Two postholes for ceiling supports within the brick structure 188.	-	237	236
Z	239	Bedrock cut	Cut	5.1	-	-	Vertical cut into bedrock with a sharp edge, confined by 188, 224, 197. Cut varies in depth from 10mm -150mm, 1m long. The southern wall of 188 sat on top of bedrock and cut. The concrete surface (236) abuts the bedrock. Some possible tooling marks present on the face of cut. Cut only extends half-way across the room.	Cut into bedrock (199) for surface 236, creating southern extent for room 188.	-	188	199
Z	240	DP brick wall	Structure	5.2	Space 1	-	DP brick structure abutting 188 within structure. 9 courses deep of english bonding, 3 rows across. Row of SS bricks between 188 and 240, possibly reused and recorded as part of 240. Grey cream cement mortar used for bonding. 236 lips up to bricks. DP bricks measure 230-235 x 110-115 x 70-75mm, with rectangular frogs present. The concrete surface (236) appears to lip up to the bricks, sealing the floor.	Internal brick wall abutting 188 and 224 of unknown purpose, probably just extra support for the structure.	Similar to the wall used to block the southern light well of 196.	237	-
Z	241	Posthole	Posthole	5.1	-	-	Three rectangular postholes in an 'L' shape. North posthole 130x70mm, 70mm deep. West posthole 110x65mm, 90mm deep. South posthole 60 x 120mm, 50-70mm deep. All with varying loose dark fills and little evidence of posts.	Postholes appearing to be contemporary with the southernmost brick structure 220. Function uncertain.	-	201	200
Z	242	Render	Surface	5.1	-	-	Thick yellow and grey render topped sandstone rubble fill, beneath 2 courses of machine made brick fill (252) in structure (220). Found in structure 1 and structure 3. Thicker in structure 3 and 3 courses of bricks.	Render of brick structure 220, possibly to do with the original purpose of the brick structures. Post-dates 220, with brick fill 252 infilled on top.	-	252	243
Z	243	Bedding fill	Levelling fill	5.1	-	-	Mixed rubbly brown sand with frequent brick and stone rubble, some slate and timber fragments, as well as charcoal and corroded metal. Covers all of space 3.	Bedding/levelling fill used to level the area for structure 196	Exposed within space 3, north end of area Z.	200	244
Z	244	Reclamation fill	Reclamation fill	5.1	-	TT5	Rubbly sandy fill with large sandstone chunks and crushed stone. No visible artefacts. Found along eastern side of Space 3.	Reclamation fill below structure 196.	-	243	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
Z	245	Reclamation fill	Reclamation fill	5.1	-	TT5	Grey-black mixed harbour sand with stone rubble and occasional artefacts. Found in western half of TT5 (c. 500mm thick), as well as small test pit abutting 198, where it was only 60-70mm thick.	Reclamation fill mixed with harbour sands sitting above bedrock.	-	243	-
X	246	Deposit	Deposit	3.2	-	-	Thin dark silty deposit observed beneath frames, above hull in boat 140.	Deposit within boat, possibly a remnant occupation deposit.	-	151, 154, 155, 157, 158, 159	140
X	247	Wood pulp deposit	Deposit	3.2	-	-	Compact dark grey sandy silt with very high concentrations of timber fragments and wood pulp. Sitting on the interior planking between 420 and 436. Considered to be a local variant of 149, possible a result of 149 washing over the stern	In-washed sediment deposit which is unusually high in timber fragments.	Found between elements 420 and 446 of 140. Contamination likely.	159	140
X	248	Clean-up	Fill	3.2	-	-	Clean-up around 132, 133 and 149	Clean up around and over boat.	-	132, 133, 149	249
X	249	Deposit	Deposit	3.2	-	TT7	Deposit located beneath boat wreck (140). Deposit consists of dark grey to black sand with darker colouring nearer the high tide mark. 249 is same as 149 but below the boat and sieved after the removal of the wreck in January 2019. A high number of organic artefacts were recovered from this fill.	Interpreted as an intertidal deposit and associated with runoff from historic termination of Clyde Street (pre-1880s termination), pre- and post-dating UDHB1 deposition.	-	149	134
W	250	Dibbs' seawall	Seawall	5.1	-	-	Dibbs' Wharf western wall. Exposed length of 1800mm and measured approximately 620mm wide. Utilised blocks similar to those in western end and southern extension of wall (102). Construction of this wall mirrors its northern counterpart (context 011) in Area R.	Dibbs' western wharf/seawall. Would have connected to 011 in Area R.	-	-	-
Z	251	Levelling cement	Levelling fill	5.1	-	-	Sandy fill and cement levelling associated with laying of cement (201) above brick paving (200). Gravel fill. Found over most areas, except any of the raised brick pads and features. Metal file found in light well in NE of wall 198. Created double-layer of flooring with cement (201).	Levelling cement used to create level space for laying of cement surface 201, above brick paving 200	Space 3, alcove.	201	200
Z	252	Brick fill	Fill	5.1	-	-	Machine-made brick fill within rectangular brick structures (220), backfill prior to laying of concrete (201) in order to level the area. This fill also included fragments of slate, industrial ash, and slag, with some sandstone rubble packing.	Backfill of brick structures (220) to level area for concrete surface 201.	-	201	242
Z	253	Corrugated iron	Structure	5.1	-	-	Corrugated iron lining the southern side of drain (203) and north side of brick paving (200). Extends for 6m and is aligned east to west.	Corrugated iron used as shoring for drain (203) and brick paving (200), and/or as the northern wall of structure (196).	-	-	-

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
Z	254	Brick pad	Structure	5.1	-	-	Six rectangular brick features located along west side of structure (196). Each pad aligned east to west, and capped by a concrete layer (222). These structures appeared to have a border of bricks as the outer layer and then bricks laid in different orientation within. Features varied in size, though bricks similar to those in 219. Similarly constructed to brick pads (219), same bricks and measurements.	Brick pads, possibly used as supports.	-	222	243
Z	255	Sump	Sump	5.1	-	-	Brick and cement sump with timber cover, abutting bedrock in north. Measures 870mm E-W x 680mm N-S, depth of up to 950mm. Ceramic service pipe present in southern wall and appears to connect to drain pipe (214).	Sump	-	205	-
Z	256	Timber beams	Structure	5.1	-	-	Two timber beams, aligned NE-SW, found below paving (200) in south-east corner of structure (196) in Area Z. Western timber was wider (170mm wide x 70mm deep). The eastern timber only 70mm wide, but very decayed.	Support for paving (200) in SE corner of Area Z, used to stabilise ground.	-	200	-
Z	257	Brick wall	Wall footing	5.2	-	-	NE-SW aligned machine-made DP (?) brick wall in SE corner of Area Z. Eastern brick wall to the west of toilet blocks. Sits above paving (200). 4 courses high, 1 brick wide (230mm). Measured 2m long. Bricks laid in alternating rows of stretcher and header bond (English bond) with a whitish-brown (pale) sandy lime mortar. Northern end (c. 800mm) wall and construction of different bricks with slate coursing. Bricks bonded randomly. At southern end, abuts wall (197), 400mm long segment, different here and rebuilt with slate coursing. No slate in centre of wall.	Internal wall, probably associated with WC's.	-	204	243?
Z	258	Brick wall	Wall footing	5.2	-	-	NE-SW aligned wall of machine-made, DP (?) bricks, parallel to wall (257) to the west, in SE corner of Area Z. At least 6-7 courses deep, with base not reached due to water level, indicating built into fills below. Abuts wall (197) in south, truncated at north end by modern service trench. Cement render (thin, <5mm) on western side of wall. Bricks all dense and machine-made, with rectangular hip-roof frog (220 x 110 x 75mm). DP? Bonded with grey compact cement mortar. Wall 1 brick wide. Alternating courses header and stretcher. Min length of 2000mm.	Western wall of WC's, based on use of render on western face.	-	204	243?
Z	259	Industrial fill	Fill	5.2	-	-	Black industrial waste (gravelly, cindery) fill found within both voids of water closets in SE corner of Area Z. Occasional ceramics found within, as well as white ceramic pipe fragments. In western water closet, a 'U' turn of a toilet bowl found within fill. Fill up to 260mm+ deep in an area 470 x 310mm.	Fill of WC's, likely used to suppress smell of toilets.	-	204	218
T	260	Structure	Structure	5.2	-	-	Iron wall anchor/deadman anchor found within cut 088, in Area T. Cuts through wall (042) near slipway. Aligned northeast to southwest. Unable to see either end as obscured by fills and water level to the south, and fills of wharf to the north.	Deadmans anchor/wall anchor.	-	87	88

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
T	261	Construction cut	Cut	6	-	-	Irregular shaped cut through centre of Area T. Appeared to cut through (O31) wharf surface but orientation (N-S) suggests it cut from higher up. Rounded corners and relatively linear. North end not uncovered.	Construction cut for 1910s wharf structure and fill.	-	010 / 262	038 / 084
T	262	Cut fill	Fill	6	-	-	Fill was a grey sandy fill with infrequent sandstone chunks.	Fill of construction cut for 1910s wharf structure.	-	10	261
W	263	Timber beam	Structure	4	-	-	Long timber beam pinned to top of stone wall (100) near southern end/central of N-S wall. Timber is 260 x 230mm in cross-section. Rectangular-cut and contains six steel or iron pins at irregular intervals of 90-940mm. Timber rotten throughout centre. Length of 4900mm. Signs of burrowing and loss of hard, external surface, top of timber at northern end almost completely lost. Hollow parts filled with dark grey-brown silty sand. Steel pins in varying states of rust and decay. Between 25mm and 40mm diameter with flattened, distorted ends from impact, sticking upright. Staining on top of stones suggests further timbers sat on top. Intervals 305mm wide, so likely original width of timber.	Timber beam sitting atop Osborne's wharf wall (100), likely an anchor beam or structural support of jetty similar to wall O42 and the beam O46.	-	-	100
W	264	Reclamation Fill	Reclamation fill	5.1	-	-	Mixed reclamation fills within interior of Dibbs' wharf in Area W. Capped by industrial fill (104). See sheet 10 of Area W notes for section of reclamation fills and detailed descriptions.	Dibbs' reclamation fill in interior of southern wharf expansion.	-	104	-
T	265	Timber post	Post	4	-	-	Rectangular timber post to southeast of sandstone paving O54 and timber structure O74. Measured 240mm long and 160mm wide x 10mm minimum depth visible, full depth unknown. Top had been cut off.	In line and at similar level as structure O74, so likely associated.	Sandstone paving O54 appears to overlie post. Initially thought part of O55 but not substantiated by the stratigraphy.	38	31
X	266	Contamination pit	Service trench	7	-	-	A contamination trench/modern pit, visible in centre of Langford's House (107), cut into fill (124) and bedrock (112). The cut measured approximately 3.2m x 1.50m. Cut not excavated, so no depth determined. Fill was a mixed brown sand with lots of inclusions of sandstone rubble, brick frags. A circular bore hole was also present just south of the pit, likely related to the testing in this area.	Modern contamination trench/disturbance.	-	-	124
X	267	Possible step	Structure	-	-	-	A square sandstone step or wall, abutting the eastern side of footings (161). Three to four courses of stones with top course of very flat stone. Not keyed into wall footings (161) but appears to abut. Possible continuation to east, but this is not clear. Nature of remains support this as being a step, as above structure was a gap in the wall footings (161) of Langford's House. The structure measured 500mm (N-S) x 570mm (E-W) with a depth of approx 400mm. Stones are possible slightly worked and different sizes. It appeared it had been cut in its eastern end, but the stones looked like it could also just be the eastern end that has been worn. Appeared earlier than later wall addition (139).	Possible step for Langford's House or a wall addition as in line with a gap in house foundations (161) it appears more likely it could be a step into the house. It possibly continued to the east but this could not be confirmed.	-	135?	134?

Area	Context	Context Type	Context Detail	Phase	Room	Trench	Context description	Interpretation	Comments	Under	Above
X	268	Fissure/cut	Cut		-	-	A N-S aligned fissure or cut in bedrock, cutting through northern room of Langford's House and footings. Exposed length of 2.5m, but disturbed by a contamination pit (266) in south and L.O.E. in north. Cut narrower at the top (500mm) widening to 1m further down, almost bell-shaped. Suggests it could be a natural fissure incorporated into the construction of Langford's House. Unsure how incorporated into house and what its purpose was. Contained fills (269), (119) and (118) + (108); fills only exposed to a max depth of 600mm. Appears cut into for (110) as it is higher in north section of (110). Almost seems like sandstone/bedrock capping at top, perhaps to level the area?	Fissure/cut in bedrock, possibly for a service or run off from the upper limits of Clyde St to the north. Either contemporary with construction of Langford's House or pre-dates the construction. Appears that cut (268) would have been cut by the construction cut (110), as (268) is visible higher up to the north and cut down into in the south. Was this cut a drainage port below the house? And where did it drain out to?	-	269	112
X	269	Mixed fill	Levelling fill	3.2	-	-	Mixed brown and grey sand fill with frequent inclusions of sandstone, corroding metal and some charcoal flecking. Exposed to a depth of between 220-270mm, though appears to be thicker; stopped at arbitrary level of digging so flat with bedrock surrounding. Very mixed fill, truncated by contamination pit (266) in the south. The fill appears to be stained from the corroding metal, creating an orange colour. Contained within cut (268). Possibly overlaid by underfloor (109) in the southern half within Langford's House, but this is difficult to determine. Perhaps the underfloor of the room was mixed in with this fill?	Backfilling of fissure/cut (268) or possibly accumulation of run-off from the north down towards the water? Or mixed with remnant underfloor?	-	119	268
X	270	Possible piles?	Structure	3.2	-	-	Three circular features/timber piles found at the bow of boat (140) on port side. Circular features appeared to be highly degraded timber that collapsed in the centre slightly and the overlying fill (149/249) had fallen into this depression. Present at point where sands (132) and (133) above met, indicating the intertidal positioning of timbers, possibly marking low tide? The features are clustered together and were varying sizes (270-360mm in diameter). Their relationship to boat appears to indicate these piles were present before the deposition of the boat, as wreck (140) overlaid (270). Appeared quite ephemeral, not much seemed to remain	Timber piles placed at the intertidal zone, possibly used to mark low tide or tether boats to etc. Found below the boat (140). Interpreted as piles, as we had seen clusters of 3 piles in later phases.	-	149	249
